

# GEOMETRIC DIMENSIONING

## FACTS TO REMEMBER

Geometric Dimensioning and Tolerancing (GD&T) is a system for defining and communicating manufacturing tolerances. It uses a set of rules and symbols to specify the form, fit, and function of a part.

**1. Feature Control Frames:** These frames contain the geometric dimensioning and tolerancing symbols and their associated tolerances. They are used to specify the form, fit, and function of a part.

**2. Datum Reference Frames:** These frames are used to establish a common reference for the manufacturing process. They are defined by datum features, which are features that are used to locate other features.

**3. Geometric Dimensioning and Tolerancing Symbols:** These symbols are used to specify the form, fit, and function of a part. They include symbols for form (straightness, circular runout, profile, circular runout, total runout), fit (parallelism, perpendicularity, angularity, symmetry), and function (concentricity, circular runout, total runout).

**4. Manufacturing Tolerances:** These tolerances are used to specify the allowable variation in the manufacturing process. They are used to define the acceptable range of dimensions for a part.

**5. GD&T Standards:** GD&T is governed by a set of standards, including ASME Y14.5 and ISO 1101. These standards provide the rules and symbols used in GD&T.
