Linde Hydraulic Control (LHC)

**Digital electro-hydraulic controller**

Introduces a series of advanced features for the new control technology, based on a hydraulic controller, a compact electronic controller equipped with a very powerful microcontroller performs all control functions for the drive unit and the working hydraulics (2).

**Adaptation to various trucks**

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To save fitting time, pre-wired connections, such as motor cables between the working fluid, already identify the truck.

**Troubleshooting**

The presence of the electronic control unit enables analogue and digital signals. The electronic controller digital messages and system errors, and displays an error message on the working instrument on the dash dashboard. In addition, the control unit accumulates a variety of messages according to the user's layout selected:

- Working light failure
- Reservoir temperature of the mineral compressor oil high
- The load sensor and emergency stop sensor are off the target zone
- The load sensor or the emergency function, the mineral compressor system switches off
- An error code appears on display

These functions can be activated by switching off the compressor engine with the key switch. During a repair, the control unit stores whether the error is still present. If the error no longer persists, the truck returns normal operation. If the error persists, the error code message on the display will not be the message for the next start-up.

**Changing the controller**

**⚠ Attention**  
 Possible hydraulic component damage due to electrolytic discharge. Irreversible damage to working elements will occur if the controller is stored.

The controller is equipped with a "float plug" which is attached to the back to avoid electrolysis. Connections must never be left open. The upper part number and the software version of the controller can be read out via the back connector.

**⚠ Warning**

If the controller is returned, the personnel using your controller must be identified and they adapted to the code numbers. All necessary information is available on the code number.
