Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated module has taken the place of the control unit. Instead of a hydraulic controller, a computer electronic controller is used. It has a very powerful microcontroller system, all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a coding that uniquely identifies the truck.

Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes digital malfunctions and system errors, and displays an error message on the display module on the seat interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light flashes
- Flashing indicator of the internal combustion engine
- The truck brakes with automatic brake release and off the engine brake
- The main battery (in the emergency function) the internal combustion engine switches off
- An error code appears on display

These functions can be activated by switching off the combustion engine with the key switch. Every 4 seconds, the control unit shows whether the error is still present. If the error is no longer present, the truck returns to normal operation. If the error persists, the error code appears on the display and one of the measures listed above is carried out.

Changing the controller

4.1.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge. Electrostatic damage is nothing dangerous and occurs if the controller is moved.

The controller is equipped with a "fingert plug" which is attached to the back to avoid static damage. Connections must never be left open. The upper part of the controller and the software version of the controller can be read out via the back interface.

If the controller is replaced, the personal work unit controller must be identified and plug adapted to the cable harness. All necessary information is available on the code Europe.
