This book contains eleven articles which provide empirical applications as well as theoretical extensions of some of the most exciting recent developments in time series econometrics. The papers are grouped around three broad themes: I the modeling of multivariate times series, II the analysis of structural change, III seasonality and fractional integration. Since these themes are closely inter related, several other topics covered are also worth stressing: vector autoregressive VAR models, cointegration and error correction models, nonparametric methods in time series and fractionally integrated models. Researchers and students interested in macroeconomic and empirical finance will find in this collection a remarkably representative sample of recent work in this area.
