A Biologist's Guide to Mathematical Modeling in Ecology and Evolution Sarah P. Otto, Troy Day, 2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists A how to guide for developing new mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available **Subject Guide to Children's Books in Print 1997** Bowker Editorial Staff, R R Bowker Publishing, 1996-09 **Mathematical Time Capsules** Dick Jardine, Amy Shell-Gellasch, 2011 Mathematical Time Capsules offers teachers historical modules for immediate use in the mathematics classroom Readers will find articles and activities from mathematics history that enhance the learning of topics covered in the undergraduate or secondary mathematics curricula Each capsule presents at least one topic or a

historical thread that can be used throughout a course The capsules were written by experienced practitioners to provide teachers with historical background and classroom activities designed for immediate use in the classroom along with further references and resources on the chapter subject Publisher description **Catalog of Copyright Entries. Lay,1994 Linear algebra is relatively easy for students during the early stages of the course when the material is presented in a familiar concrete setting But when abstract concepts are introduced students often hit a brick wall Instructors seem to agree that certain concepts such as linear independence spanning subspace vector space and linear transformations are not easily understood and require time to assimilate Since they are fundamental to the study of linear algebra students understanding of these concepts is vital to their mastery of the subject Lay introduces these concepts early in a familiar concrete R^n setting develops them gradually and returns to them again and again throughout the text so that

when discussed in the abstract these concepts are more accessible **The Bookseller** ,1914 Official organ of the book
