On the Differential Structure of Metric Measure Spaces and Applications Nicola Gigli, 2015-06-26 The main goals of this paper are i To develop an abstract differential calculus on metric measure spaces by investigating the duality relations between differentials and gradients of Sobolev functions This will be achieved without calling into play any sort of analysis in charts our assumptions being the metric space is complete and separable and the measure is Radon and non negative ii To employ these notions of calculus to provide via integration by parts a general definition of distributional Laplacian thus giving a meaning to an expression like where is a function and is a measure iii To show that on spaces with Ricci curvature bounded from below and dimension bounded from above the Laplacian of the distance function is always a measure and that this measure has the standard sharp comparison properties This result requires an additional assumption on the space which reduces to strict convexity of the norm in the case of smooth Finsler structures and is always satisfied on spaces with linear Laplacian a situation which is analyzed in detail

Degree Spectra of Relations on a Cone Matthew Harrison-Trainor, 2018-05-29 Let \mathcal{A} be a mathematical structure with an additional relation R The author is interested in the degree spectrum of R either among computable copies of \mathcal{A} when \mathcal{A} is a natural structure or to make this rigorous among copies of \mathcal{A} R computable in a large degree d He introduces the partial order of degree spectra on a cone and begin the study of these objects Using a result of Harizanov that assuming an effectiveness condition on \mathcal{A} and R if R is not intrinsically computable then its degree spectrum contains all $c \leq d$ degrees the author shows that there is a minimal non trivial degree spectrum on a cone consisting of the $c \leq d$ degrees

An Age of Accountability John L. Rury, 2023-10-13 *An Age of Accountability* highlights the role of test based accountability as a policy framework in American education from 1970 to 2020 For more than half a century the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment The theory of change embedded in almost all test based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps which repeatedly failed to materialize But even after very clear disappointments no other policy framework has emerged to challenge its hegemony The American public today has little confidence in institutions to improve the quality of goods and services they provide especially in the public sector As a consequence many Americans continue to believe that accountability remains a vital necessity even if educators and policy scholars disagree

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14-19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools

System Recall Alma Harris, Michelle S. Jones, 2019-10-17 This book argues that much of what passes as contemporary educational reform in education is faulty and damaging It argues that it is time for a system recall and a need to look at what matters most in the pursuit of educational goals The book focuses on what we know about contemporary educational improvement transformation and change It will provide insights into what strategies work long term to build the capacity for principled change at the school and system level The book will consider what leaders can do to secure principled school and system improvement which fully embraces diversity equity and equality It will also dispel some myths about reform at scale and challenge some prevailing ideas about educational change that it will be posited are not helping many young people to reach their potential The main argument of the book is that too many school and system improvement initiatives have not paid sufficient attention to equity issues in their pursuit of ever higher achievement and

that the net effect of large scale international assessments have been to distract policy makers in ways that have not always benefitted young people The book will use system examples to underpin and exemplify six core ways of re botting the system and generating progress for all It will highlight the implications for school and system leaders *Government Reports Announcements & Index* ,1994 *Paperbound Books in Print* ,1991 **Books in Series** ,1985 Vols for 1980 issued in three parts Series Authors and Titles
