

**6.22** Give a formal proof assuming the informal proof on page 187 of  $\neg(b \wedge c)$  from the premises  $\text{Cube}(c) \vee \text{Dodec}(c)$  and  $\text{Red}(c)$ . You may apply **Ass One** to Dodec as well as to  $\neg(b \wedge c)$ .

**6.23** Give an informal proof that might have been used by the student in constructing the formal proof shown on page 187.

In each of the following exercises, give an informal proof of the validity of the indicated argument. (You should never use the principles you are proving in your informal proof, for example in Exercise 6.23, you should not use *Reduction* in your informal proof.) Then use *Flash* to construct a formal proof that assumes your informal proof as much as possible. There is your informal proof; be your criticizer and refine the formal proof in the usual way.

**6.24**  
 $\begin{array}{l} \vdash (A \vee B) \\ \text{Ass } 1 \\ \vdash \neg A \vee B \end{array}$

**6.25**  
 $\begin{array}{l} \vdash A \vee B \\ \text{Ass } 1 \\ \vdash \neg(A \vee B) \end{array}$

**6.26**  
 $\begin{array}{l} \vdash A \vee (B \wedge C) \\ \text{Ass } 1 \\ \vdash B \vee \neg C \vee B \\ \vdash A \vee B \end{array}$

**6.27**  
 $\begin{array}{l} \vdash (A \vee B) \vee (C \vee D) \\ \text{Ass } 1 \\ \vdash (B \vee C) \vee (D \vee E) \\ \vdash C \vee (A \vee E) \end{array}$

In each of the following exercises, you should decide whether the argument is valid. If it is, use *Flash* to construct a formal proof. You may use **Ass One** for only one line of the proof and  $\perp$ . If it is not valid, use *Flash's* *World* to construct a counterexample.

**6.28**  
 $\begin{array}{l} \vdash \text{Cube}(x) \vee \text{Small}(x) \\ \text{Ass } 1 \\ \vdash \text{Dodec}(x) \\ \vdash \text{Small}(x) \end{array}$

**6.29**  
 $\begin{array}{l} \vdash \text{Large}(x, y) \vee \text{Large}(x, z) \\ \text{Ass } 1 \\ \vdash \text{Small}(x, y) \vee \neg \text{Large}(x, y) \\ \vdash \text{Large}(x, z) \end{array}$

**6.30**  
 $\begin{array}{l} \vdash (\text{Cube}(x) \wedge \text{Cube}(y)) \\ \text{Ass } 1 \\ \vdash \neg(\text{Cube}(x) \wedge \text{Cube}(y)) \\ \vdash \text{Cube}(x) \end{array}$

**6.31**  
 $\begin{array}{l} \vdash \text{Dodec}(x) \vee \text{Cube}(x) \\ \text{Ass } 1 \\ \vdash \text{Small}(y) \vee \text{Medium}(y) \\ \vdash (\text{Small}(y) \wedge \text{Cube}(x)) \\ \vdash \text{Medium}(x) \vee \text{Dodec}(x) \end{array}$

**6.32**  
 $\begin{array}{l} \vdash \text{Dodec}(x) \vee \text{Cube}(x) \\ \text{Ass } 1 \\ \vdash \text{Small}(y) \vee \text{Medium}(y) \\ \vdash \text{Small}(y) \wedge \neg \text{Cube}(x) \\ \vdash \text{Medium}(y) \vee \text{Dodec}(x) \end{array}$

## Proofs without premises

Not all proofs begin with the assumption of premises. This may seem odd, but in fact it is how we use our deductive system to show that a sentence is a logical truth. A sentence that can be proven without any premises at all is necessarily true. Here's a trivial example of such a proof, one that shows that  $a \rightarrow a \vee b \rightarrow b$  is a logical truth.

demonstrating  
logical truth

1. $a \rightarrow a$	= <b>Intro</b>
2. $b \rightarrow b$	= <b>Intro</b>
3. $a \rightarrow a \vee b \rightarrow b$	= <b>Intro</b> 1, 2

The first step of the proof is not a premise, but an application of **Intro**. You might think that any proof without premises must have to start with this rule, since it is the only one that doesn't have to do any supposing steps earlier in the proof. But in fact, this is not a very representative example of such proofs. A more typical and interesting proof without premises is the following, which shows that  $\neg(P \wedge \neg P)$  is a logical truth.

1. $P \wedge \neg P$	= <b>Ass 1</b>
2. $P$	= <b>Elim 1</b>
3. $\neg P$	= <b>Elim 1</b>
4. $\perp$	= <b>Intro</b> 2, 3
5. $\neg(P \wedge \neg P)$	= <b>Intro</b> 1-4

Notice that there are no assumptions about the first horizontal *Flash* bar, indicating that the entire proof has no premises. The last step of the proof is the subproof's assumption. The subproof proceeds to derive a contradiction, based on this assumption, thus allowing us to conclude that the negation of the subproof's assumption follows without the need of premises. In other words, it is a logical truth.

When we want you to prove that a sentence is a logical truth, we will use *Flash* notation to indicate that you must prove this without assuming any premises. For example the above proof shows that the following "argument" is valid.

**Applied Set Theory and Logic** John-Michael Kuczynski, 2025-06-12 Applied Set Theory and Logic is a comprehensive guide to the core principles of set theory and mathematical logic with an emphasis on real world applications in computer science engineering and digital systems Bridging rigorous theoretical foundations with practical examples the book explores topics ranging from propositional calculus and predicate logic to modal logic database systems circuit verification and algorithm design Through hundreds of worked examples and exercises readers learn to apply logical reasoning to concrete problems in programming software verification hardware design and information systems Advanced topics include modal logic recursion transitivity Von Neumann and Zermelo ordinals Boolean algebra and formal proof techniques Each chapter highlights the relevance of logic and set theory to contemporary computational systems and digital technologies Suitable for students engineers computer scientists and researchers Applied Set Theory and Logic serves both as a theoretical reference and a practical guide to the logical structures that underlie modern technology     **The Method of Socratic Proofs** Dorota Leszczyńska-Jasion, 2025-06-13 This book contains a systematic and formal attempt to model solutions to problems such as Is it possible to prove a question Is it possible to prove something by the use of questions Do the existing paradigms in the logic of questions allow one to combine questions and proofs What are the results in this field In developing answers the book focuses on the applications of the method of Socratic proofs and goes beyond that It starts out with an overview of the leading paradigms issues problems and ready solutions in the logic of questions and places Inferential Erotetic Logic and the method of Socratic proofs against a wider background It then introduces these two methods in more detail and explains how they can be used for classical logic intuitionistic propositional logic and for basic modal logics Next the book deals with issues specific to the field of the logic of questions introducing the tools of Minimal Erotetic Semantics MiES The final chapters describe the translations between proof systems from a Socratic transformation derived in an erotetic calculus into a sequent system     **On the Logic and Learning of Language** Sean A. Fulop, 2004 This book presents the author's research on automatic learning procedures for categorial grammars of natural languages The research program spans a number of intertwined disciplines including syntax semantics learnability theory logic and computer science The theoretical framework employed is an extension of categorial grammar that has come to be called multimodal or type logical grammar The first part of the book presents an expository summary of how grammatical sentences of any language can be deduced with a specially designed logical calculus that treats syntactic categories as its formulae Some such Universal Type Logic is posited to underlie the human language faculty and all linguistic variation is captured by the different systems of semantic and syntactic categories which are assigned in the lexicons of different languages The remainder of the book is devoted to the explicit formal development of computer algorithms which can learn the lexicons of type logical grammars from learning samples of annotated sentences The annotations consist of semantic terms expressed in the lambda calculus and may also

include an unlabeled tree structuring over the sentence The major features of the research include the following We show how the assumption of a universal linguistic component the logic of language is not incompatible with the conviction that every language needs a different system of syntactic and semantic categories for its proper description The supposedly universal linguistic categories descending from antiquity noun verb etc are summarily discarded Languages are here modeled as consisting primarily of sentence trees labeled with semantic structures a new mathematical class of such term labeled tree languages is developed which cross cuts the well known Chomsky hierarchy and provides a formal restrictive condition on the nature of human languages The human language acquisition mechanism is postulated to be biased such that it assumes all input language samples are drawn from the above syntactically homogeneous class in this way the universal features of human languages arise not just from the innate logic of language but also from the innate biases which govern language learning This project represents the first complete explicit attempt to model the acquisition of human language since Steve Pinker's groundbreaking 1984 publication *Language Learnability and Language Development*
