**Geoenvironmental Practices and Sustainability** G.L. Sivakumar Babu, Krishna R. Reddy, Anirban De, Manoj Datta, 2017-06-05 This volume is a compilation on issues related to sustainable practices in geo-environmental engineering, particularly as applying to developing nations such as India. While the developed world has already developed some solutions such as landfills, developments in landfills, barriers, and liners in North America, and waste-to-energy and waste incineration in Europe, developing countries like India are trying to figure out ways which suit the present condition without compromising the future needs and comforts. This volume presents case studies on the various problems and solutions adopted for different sites. Although a common approach for all the problems is not feasible, or recommend this collection aims to provide a compendium on the current efforts underway and to help achieve common ground for the practitioners and researchers involved. The works included here give insight to the possible development of resilient and sustainable structures like offshore wind turbines and energy geotechnics. The book covers topics such as liners and barrier systems, use of recycled and waste materials, waste management, and hazard assessment, sustainable infrastructure, and sustainability and the environment. The contents of this book will be useful to researchers and professionals working in geo-environmental engineering. The book will also be useful to policy makers interested in understanding geotechnical concerns related to sustainable development.

**Drawing Down N<sub>2</sub>O to Protect Climate and the Ozone Layer**, 2013 This report addresses the benefits of drawing down nitrous oxide N<sub>2</sub>O emissions N<sub>2</sub>O is now the most significant ozone depleting substance emission and the third most important greenhouse gas released into the atmosphere Global anthropogenic N<sub>2</sub>O emissions are rapidly increasing and are expected to almost double by 2050 unless mitigation action is accelerated The continued build up of N<sub>2</sub>O

in the atmosphere will continue to deplete the stratospheric ozone layer and in so doing will to a degree undermine the achievements of the Montreal Protocol The build up of N<sub>2</sub>O will also make it more difficult to achieve climate targets Two thirds of current anthropogenic N<sub>2</sub>O emissions originate from agriculture and these can be reduced by boosting nitrogen use efficiency especially by making the use of fertilizer manure and feed more efficient Improving nitrogen use efficiency can be accomplished through a wide variety of feasible options      *Forest Systems* ,2014      *Ghana's Second National Communication to the UNFCCC, 2011* ,2011      **OPEC Bulletin** ,2013
