

GSD AC Drive Installation Instructions

WARNING: Before Starting, Warning: Frequency Inverter

- Read the instructions about thoroughly before installation and use for the safety.
- Ensure the safety of power and equipment, and qualified personnel should work on the drive and wiring, and ensure the GSD drive. Please read the instruction sheet thoroughly before using the GSD drive, especially the WARNING, NOTICE and CAUTION notes. If you have any questions, please contact WATSONDIRECT.

PLEASE READ PRIOR TO INSTALLATION FOR SAFETY

	<ul style="list-style-type: none"> The ground terminal of the GSD drive must be grounded correctly. The grounding method should comply with the laws of the country where the GSD drive is to be installed. After power has been turned off, the capacitor in the GSD drive may retain a charge for several minutes. To prevent personal injury, always verify that the "GSD" indicator is turned off. This indicates to confirm that the DC bus voltage has decreased sufficiently and is less than 200V before touching any terminals. Capacitor discharge will take at least 5 minutes for most GSD models. The GSD drive is an internal component of the GSD drive and is sensitive to static electricity. Please do not touch the internal boards with your bare hands before making any cable connection. Please disconnect the internal components in advance. During changes to the wiring, turn off power to the GSD drive before making these changes. When the internal DC bus capacitor in the GSD drive software is in discharge state for making changes to power or wiring, failure to do so may result in short circuit and fire. To prevent personal injury, allow the DC bus voltage to discharge to 0 V before making wiring changes to the GSD drive. Do not touch the GSD drive in locations subject to high temperature, direct sunlight, or harmful radiation.
	<ul style="list-style-type: none"> When supply power to the GSD drive (AC, 400V, 480V or 600V), do not touch the GSD drive during operation of the GSD drive, only for the built-in fan components and connector system in order for the fan to be able to dissipate the GSD drive. Do not use the GSD drive for internal components. The same conditions in the GSD drive are easily damaged by high voltage.
	<ul style="list-style-type: none"> Long-term high-frequency may result in excessive noise due to impedance mismatch between the motor cable and the motor. Excessive noise may damage the insulation of the motor. To ensure the safety of the motor, excessive noise damage, use an inductor cable motor with an impedance rating of 100V only. A shield cable inductor between the GSD drive and motor will help to mitigate reflection noise. Maximum supply voltage to the GSD drive should be less than or equal to 200V/240V/277V/480V depending on GSD model. Maximum supply current capacity should be less than or equal to 200A for all GSD models. The GSD drive should be installed in a clean, well-ventilated and dry location, free from excessive gases or vapors. The GSD drive must be stored within an ambient temperature range from -40°C to +60°C, and relative humidity range of 0% to 95% without condensation. Do not apply 400V power to the GSD drive with the front cover removed. Removing a fault of the GSD drive, with 5 seconds before pressing the 400V key. To improve power factor, install a power factor corrector on the output drive. Do not install power factor correction capacitor in the main AC supply circuit to the GSD drive to prevent drive fault due to over current.

Attention (Notes)

- AC input power to 400V, 480V, 575V/600V single-phase input, current of the terminals (the applicability of the power input power, please refer to Figure 1 on the Appendix GSD AC Drive User Manual [WATSONDIRECT](#)).
- Ground from the power supply.
- One power to the motor is 400V, 480V, 575V/600V and with 3-phase motor only.
- Ground to the motor.
- After power is turned off, the drive must be wired through appropriate AC safety rated contacts in all drive the safety installation must be fully in place.

With the correct wiring, the drive can be operated via the keypad, the motor and drive installation for the "WATSONDIRECT" GSD AC Drive to configure the drive for proper operation.

WATSONDIRECT Safety Notes

We strongly recommend that customers use the GSD safety features.

The Safe Torque Off (STO) function turns off the power supplied to the motor through the feedback, or that the motor cannot produce torque. This method of removing power from the motor is considered an emergency stop, also known as "hold to stop".

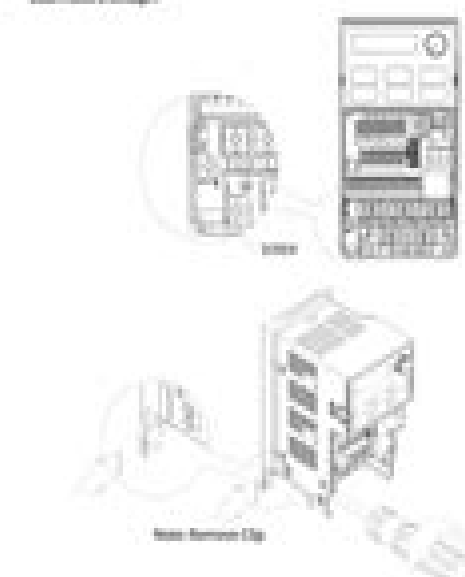

To use the feature, disconnect the appropriate factory-installed jumper and wire a safety relay or safety PLC as shown. The STO function should be wired through a safety relay or PLC to meet category 3 safety requirements. See the User Manual Appendix 1 for wiring the GSD with STO.

Warning: Grounding

AC source connection

If the power distribution system supplying the GSD AC drive is a floating AC or an ungrounded ground system (including most 10kV systems), the RFI jumper must be removed. Removing the RFI jumper increases the internal RFI capacitor filter capacitor between the GSD drive frame and chassis to avoid damaging these capacitors and according to IEC 61800-3 to reduce ground leakage current.
