Press and hold to activate MicroSensors. Make sure the back plate is in contact with your wrist. Heart icon will flash.

Wait for Heart Rate readout (4-7 seconds). Your MIO will beep to let you know that the reading is ready.

The small digits displaying on the right show your percentage heart rate in relation to your maximum heart rate (up to 199%). MIO calculates this percentage using your personal data. (See Step B)

A maximum heart rate is an estimate with a variability of up to 25 BPM.

Your screen will return to the previous mode 5 seconds after removing your finger pads from the MicroSensors.

## TROUBLESHOOTING POINTERS

1. Make sure the back plate is in contact with your wrist during the measurement.
2. If you don't get your heart rate within 30 sec, position finger pads and try again. It helps to wear your MIO for a little while to allow a layer of moisture to build up between the back of the watch and your arm.
3. If MIO's calculations start to vary significantly from what you have come to expect, if the digits freeze or if the face is blank, replace MIO's battery (See section K on page 2).
4. To optimize readings, occasionally clean the back of your MIO case and the RIGHT and LEFT MicroSensors with a clean soft cloth.

## I. SET RESTING HEART RATE

For the most accurate reading, set this function when you first wake up in the morning (without an alarm clock). Until then, use the default resting heart rate (70 BPM).

- Press MODE 4 times to go from TIME to RESTING HEART RATE. Your most recent RHR will display.
- Place two finger pads on the MIO Sensors as described in Section H. Heart icon blinks. Your resting heart rate should appear within 4 to 7 seconds.
