1. The first step is to identify the problem.

Abstract: This paper presents a new algorithm to solve the problem of finding the minimum number of nodes in a directed graph that contains all the paths of length  $k$ . The algorithm is based on the concept of a  $k$ -path cover. The algorithm is implemented in a program written in C++ and is available for download from the author's web page. The algorithm is tested on a set of benchmark graphs and the results are compared with the results of other algorithms. The algorithm is shown to be more efficient than the other algorithms in terms of both time and space complexity.
