Spalding, Ananda Chatterjee, 2017-10-12 This handbook provides an exhaustive description of polyethylene. The 50 chapters are written by some of the most experienced and prominent authors in the field, providing a truly unique view of polyethylene. The book starts with a historical discussion on how low density polyethylene was discovered and how it provided unique opportunities in the early days. New catalysts are presented and show how they created an expansion in available products including linear low density polyethylene, high density polyethylene copolymers, and polyethylene produced from metallocene catalysts. With these different catalyst systems, a wide range of structures are possible with an equally wide range of physical properties. Numerous types of additives are presented that include additives for the protection of the resin from the environment and processing fillers, processing aids, anti-fogging agents, pigments, and flame retardants. Common processing methods including extrusion, blown film, cast film, injection molding, and thermoforming are presented along with some of the more specialized processing techniques such as rotational molding, fiber processing, pipe extrusion, reactive extrusion, wire and cable, and foaming processes. The business of polyethylene, including markets, world capacity, and future prospects, are detailed. This handbook provides the most current and complete technology assessments and business practices for polyethylene resins. *Mechanics of Materials with ConnectPlus 1 Semester Access Card for Mechanics of Materials*

Sandwich Composites Senthilkumar Krishnasamy, Chandrasekar Muthukumar, Senthil Muthu Kumar Thiagamani, Sanjay Mavinkere Rangappa, Suchart Siengchin, 2022-01-25 A composite sandwich panel is a hybrid material made up of constituents such as a face sheet, a core, and adhesive film for bonding the face sheet and core together. Advances in materials have provided designers with several choices for developing sandwich structures with advanced functionalities. The selection of a material in the sandwich construction is based on the cost, availability, strength requirements, ease of manufacturing, machinability, and post-manufacturing process requirements. *Sandwich Composites: Fabrication and Characterization* provides insights into composite sandwich panels based on the material aspects, mechanical properties, defect characterization, and secondary processes after the fabrication, such as drilling and repair. **FEATURES** Outlines existing fabrication methods and various materials aspects. Examines composite sandwich panels made of different face sheets and core materials. Covers the response of composite sandwich panels to static and dynamic loads. Describes parameters governing the drilling process and repair procedures. Discusses the applications of composite sandwich panels in various fields. Explores the role of 3D printing in the fabrication of composite sandwich panels. Due to the wide scope of the topics covered, this book is suitable for researchers and scholars in the research and development of composite sandwich panels.
