Manual Delta 2015 Automatic:

Proceedings of the 10th International Conference on Mechanical, Automotive and Materials Engineering John P. T. Mo, 2024-09-24 This book consists of selected papers presented at the 10th International Conference on Mechanical Automotive and Materials Engineering CMAME 2023 held in Da Nang Vietnam on 20-22 December 2023. Readers find this book a vehicle for the dissemination of research results on latest advances made in this area. It is expected that the publication of the research papers with the advanced topics listed in this book will further promote high standard academic research in the field and make a significant contribution to the development of human society. Topics that will be covered in this book include but not limited to materials science and engineering, engine system design and power machinery, mechanical design, manufacture and automation design and analysis of robot systems, automobile design and manufacturing engineering, thermal and fluid mechanics analysis, aircraft structural design and system control, control theory and engineering applications, electronic information technology. This book is intended for researchers, engineers and advanced postgraduate students in the fields of automotive production, industrial engineering and design. Modeling of Hydrodynamics and Sediment Transport in the Mekong Delta Vo Quoc Thanh, 2021-09-23 This research aims to investigate the prevailing sediment dynamics and the sediment budget in the Mekong Delta by using a process based model. Understanding sediment dynamics for the Mekong Delta requires high resolution analysis and detailed data which is a challenge for managers and scientists. This study introduces such an approach and focuses on modeling the entire system with a process based approach with Delft3D 4 and Delft3D Flexible Mesh DFM. The first model is used to explore sediment dynamics at the coastal zone. The latter model allows straightforward coupling of 1D and 2D grids making it suitable for analyzing the complex river and canal network of the Mekong Delta. The validated model suggests that the Mekong Delta receives 99 Mt/year sediment from the Mekong River. This is much lower than the common estimate of 160 Mt/year. Only about 23% of the modelled total sediment load at Kratie is exported to the sea. The remaining portion is trapped in the rivers and floodplains of the Mekong Delta. The results advance understanding of sediment dynamics and sediment budget in the Mekong Delta. As such, the model is an efficient tool to support delta management and planning. **Embedded Platforms for UAS Landing Path and Obstacle Detection** Umberto Papa, 2018-01-05 This book reports on the design and development of a system that assists remote pilots during the landing procedure. In particular, it covers a previously neglected topic, namely the search for the best pathway and landing site. It describes the system's components such as the ultrasonic sensor, infrared sensor and optical sensor in detail and discusses the experimental tests carried out in both controlled laboratory and real world environments. Providing a fascinating survey of the state of the art in the field of unmanned aircraft system electronics design and development, the book also presents recent advances in and cutting edge methodologies for the development of acquisition systems and inexpensive sensor design for navigation data.
