Maths Mate 7 ,1995-11     **Thinking Critically through Digital Media** Nik Peachey, Although the use of internet and digital materials in the language classroom has come a long way over the last 25 years still the vast majority of web based material that finds its way into the language classroom is used for information input or comprehension purposes The students interaction with the materials is as such largely passive with the teacher controlling the suitability of the materials selected and deciding what information the students will extract from it In Thinking Critically through Digital Media I have tried to build on this model but develop it and take it to deeper and more critical levels of analysis that go beyond the superficial linguistic level and help to develop students not only as English language speakers but as capable information literate participants in the global knowledge economy The book uses as its basis the development of key digital literacies These include the ability to understand visually presented data the ability collect and analyse data using a range of techniques and survey tools and the ability to create and deliver a range of presentation types using digital media tools Whilst developing these digital literacies students are also encouraged to assess the validity credibility and underlying bias of the information they study and are given a range of research tools and techniques for reassessing the information and evaluating how it fits within their personal framework of belief systems and values The book itself has four main chapters The first three chapters contain a range of activities that teachers can use with students to develop their abilities to understand and create

infographics develop research polls and surveys and create and deliver presentations These activities give students hands on exposure to a range of recommended tools and develop students as active creators of information whilst developing their abilities to work collaboratively in digital online environments The fourth key chapter of the book is a collection of lesson plans that teachers can use to take students through a complete process from accessing their existing knowledge about a topic understanding new input examining how the information fits into their existing value scheme checking the credibility and validity of the information carrying out their own parallel research through social media to finally sharing and reevaluating what they have learned You can see an example of the classroom materials here [https://bit.ly/intro\\_extro\\_demo](https://bit.ly/intro_extro_demo) I believe that the skills and abilities teachers can help students develop through the use of these materials are ones that are sadly lacking not only in the English language classroom but also in the general education of many students around the world Through the use of these materials I hope teachers can develop more actively and intellectually critical students who approach digital media with the ability not only to comprehend and consume information but also understand the possible bias motivation and underlying values of those creating the information I believe these skills and abilities are key to creating a more tolerant open minded and critically aware global society
