Model Predictive Control Baocang Ding, Yuanqing Yang, 2024-03-19 Model Predictive Control Understand the practical side of controlling industrial processes Model Predictive Control MPC is a method for controlling a process according to given parameters derived in many cases from empirical models It has been widely applied in industrial units to increase revenue and promoting sustainability Systematic overviews of this subject however are rare and few draw on direct experience in industrial settings Assuming basic knowledge of the relevant mathematical and algebraic modeling techniques the book s title combines foundational theories of MPC with a thorough sense of its practical applications in an industrial context The result is a presentation uniquely suited to rapid incorporation in an industrial workplace Model Predictive Control readers will also find Two part organization to balance theory and applications Selection of topics directly driven by industrial demand An author with decades of experience in both teaching and industrial practice This book is ideal for industrial control engineers and researchers looking to understand MPC technology as well as advanced undergraduate and graduate students studying predictive control and related subjects

[Automotive Model Predictive Control](#) Luigi Del Re, Frank Allgöwer, Luigi Glielmo, Carlos Guardiola, Ilya Kolmanovsky, 2010-03-11 Automotive control has developed over the decades from an auxiliary technology to a key element without which the actual performances emission safety and consumption targets could not be met Accordingly automotive control has been increasing its authority and responsibility at the price of complexity and difficult tuning The progressive evolution has been mainly led by speci

applications and short term targets with the consequence that automotive control is to a very large extent more heuristic than systematic. Product requirements are still increasing and new challenges are coming from potentially huge markets like India and China and against this background there is wide consensus both in the industry and academia that the current state is not satisfactory. Model based control could be an approach to improve performance while reducing development and tuning times and possibly costs. Model predictive control is a kind of model based control design approach which has experienced a growing success since the middle of the 1980s for slow complex plants in particular of the chemical and process industry. In the last decades several developments have allowed using these methods also for fast systems and this has supported a growing interest in its use also for automotive applications with several promising results reported. Still there is no consensus on whether model predictive control with its high requirements on model quality and on computational power is a sensible choice for automotive control.

Process Dynamics and Control Dale E. Seborg, Thomas F. Edgar, Duncan A. Mellichamp, Francis J. Doyle, III, 2016-09-13 The new 4th edition of Seborg's Process Dynamics Control provides full topical coverage for process control courses in the chemical engineering curriculum emphasizing how process control and its related fields of process modeling and optimization are essential to the development of high value products. A principal objective of this new edition is to describe modern techniques for control processes with an emphasis on complex systems necessary to the development design and operation of modern processing plants. Control process instructors can cover the basic material while also having the flexibility to include advanced topics.

Explicit Nonlinear Model Predictive Control Alexandra Grancharova, Tor Arne Johansen, 2012-03-22 Nonlinear Model Predictive Control NMPC has become the accepted methodology to solve complex control problems related to process industries. The main motivation behind explicit NMPC is that an explicit state feedback law avoids the need for executing a numerical optimization algorithm in real time. The benefits of an explicit solution in addition to the efficient on line computations include also verifiability of the implementation and the possibility to design embedded control systems with low software and hardware complexity. This book considers the multi parametric Nonlinear Programming mp NLP approaches to explicit approximate NMPC of constrained nonlinear systems developed by the authors as well as their applications to various NMPC problem formulations and several case studies. The following types of nonlinear systems are considered resulting in different NMPC problem formulations: Nonlinear systems described by first principles models and nonlinear systems described by black box models. Nonlinear systems with continuous control inputs and nonlinear systems with quantized control inputs. Nonlinear systems without uncertainty and nonlinear systems with uncertainties: polyhedral description of uncertainty and stochastic description of uncertainty. Nonlinear systems consisting of interconnected nonlinear sub systems. The proposed mp NLP approaches are illustrated with applications to several case studies which are taken from diverse areas such as automotive mechatronics compressor control combustion plant control reactor control pH maintaining system control cart and spring system control and diving computers.
