Hurd, Gordon R. Wilson, Derek W. Spencer, American Geophysical Union, 1991-01-08 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 62 The ultimate goal of modeling of the plasma in Earth's environment is an understanding of the magnetosphere and ionosphere as a coupled global system To achieve this goal requires a coordinated effort between models applied to different spatial scales The desire to model this system on a global scale is leading to models which encompass larger and larger regions The ever increasing availability of computing resources has allowed models to expand to 2 and 3 dimensions At the other extreme are the micro scale processes which transfer energy to individual particles within the global system As more detailed observations become available the necessity for accurately including such processes in the global models becomes more apparent Then it becomes a question of how to incorporate the necessary physical processes from all scale sizes into a model of a global system It now seems clear that such multi scale scenarios exist where micro scale processes provide energy to the plasma which flows outward from Earth into the distant magnetotail before returning to the near Earth regions The challenge of incorporating all relevant processes into a model of this entire plasma path is a formidable one The existence of separate models of the separate steps along this pathway leads directly to efforts to fuse models with different scales into a single self consistent treatment *Research in Chemistry at Undergraduate Institutions* ,1985 Lagrangian Modeling of the Atmosphere John Lin, Dominik Brunner, Christoph Gerbig, Andreas Stohl, Ashok Luhar, Peter Webley, 2013-05-28 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 200 Trajectory based Lagrangian atmospheric transport and dispersion modeling has gained in popularity and sophistication over the previous several decades It is common practice now for researchers around the world to apply Lagrangian models to a wide spectrum of issues Lagrangian Modeling of the Atmosphere is a comprehensive volume that includes sections on Lagrangian modeling theory model applications and tests against observations Published by the American Geophysical Union as part of the Geophysical Monograph Series Comprehensive coverage of trajectory based atmospheric dispersion modeling Important overview of a widely used modeling tool Sections look at modeling theory
