Mars analogs: Environment, Habitability and Biodiversity Yiliang Li, André Antunes, Maggie CY Lau Vetter, David Flannery, 2023-06-15 Martian surface contains diverse lithologies from sedimentary rocks to mafic ultramafic igneous rocks and ground patterns These rocks record the late stage evolution on the Martian surface from a temperate environment with bodies of liquid water to the current cold and hyper arid environment The constraints on the key parameters and processes for water rock interaction sedimentation of materials and geomorphological development can provide important insights into the environmental change and habitability on the Martian surface However due to the difficulty in accessing Martian samples and limited remote sensing data available from the Martian surface most of the mysteries on Mars remain unraveled In this proposed research topic we will focus on geological settings on Earth that are similar to the conditions on Mars These Mars analogs are employed to infer possible processes on Mars and their impact on habitability and the search for life The Mars analogs on Earth span a variety of environments such as the super arid sedimentary plains e g the Qaidam Basin in the north of the Tibetan Plateau the Mojave Basin in the USA and the Atacama Desert in South America the subsurface fracture waters in Precambrian cratons e g the Canadian Shield the Fennoscandian Shield and the Kaapvaal Craton high salinity localities e g Laguna de T rez salt mines and deep sea brines as well as extremely cold and highly radiative environments e g polar regions thin atmosphere These settings on Earth are more accessible for collecting high quality mineralogical geochemical geochronological and microbiological data by the state of the art facilities These data can provide a solid cornerstone for us to understand the cycles of water and other life essential elements and their impact on habitability and biodiversity in extreme environments on Earth as well as the limits of life and the detection of biosignatures Such research can also provide vital insights on the search for life on other planets and moons
