15 minutes	Daily Routine: Problem of the Day: Draw counters to add: $7 + 7 = \underline{\quad}$ I Do: Instruct students to use connecting cubes or draw the problem: $4 + 5 = \underline{\quad}$ Then, model for students how the reverse order of the addends does not change the sum. The addition facts $4 + 5 = 9$ and $5 + 4 = 9$ have the same part and whole. Changing the parts added does not change the whole. (Early finishers try $4 + 4 = 8$) Do over vocabulary	What will happen to the total number of cubes if you change the order of the numbers being added? Explain. How can models help you solve this problem? Can you write another addition fact with 4, 5, and 9?												
15 minutes	We Do: Page 6: Look at the models: $6 + 3$ Model Thinking: You can start with 6 and count on 3. Since 6 is a greater number it is easier to count on 3 more (7, 8, 9). When you use a smaller number you need to count on more and can make mistakes. For example $3 + 6$ (4, 5, 6, 7, 8, 9). How are these two addition equations alike? $6 + 3$ and $3 + 6$. How are they different? How do you know that $3 + 6$ and $6 + 3$? Together as a class complete problems 1 and 2. Name and Talk: If you add two numbers in a different order will you get the same sum? Turn and Talk 2: Create a QOE question about the order of addends. Ask your partner.	Is counting on 3 cubes from 6 easier or harder than just counting all the cubes? (easier) Why is it easier to count on from a greater number, 6, than to count on from the lesser number, 3? How is $6 + 3$ the same as or equal to $3 + 6$ (When you add $6 + 3$, the value is 9, and 9 is equal to 9. Does $3 + 6$ also have the same value as 9?

Improving Working Memory in Learning and Intellectual Disabilities Silvia Lanfranchi,Barbara Carretti,2016-08-05 The last forty years of research have demonstrated that working memory WM is a key concept for understanding higher order cognition To give an example WM is involved in reading comprehension problem solving and reasoning but also in a number of everyday life activities It has a clear role in the case of atypical development too For instance numerous studies have shown an impairment in WM in individuals with learning disabilities LD or intellectual disabilities ID and several researchers have hypothesized that this can be linked to their difficulties in learning cognition and everyday life The latest challenge in the field concerns the trainability of WM If it is a construct central to our understanding of cognition in typical and atypical development then specific intervention to sustain WM performance might also promote changes in cognitive processes associated with WM The idea that WM can be modified is debated however partly because of the theoretical implications of this view and partly due to the generally contradictory results obtained so far In fact most studies converge in demonstrating specific effects of WM training i e improvements in the trained tasks but few transfer effects to allied cognitive processes are generally reported It is worth noting that any maintenance effects when investigated are even more meagre In addition a number of methodological concerns have been raised in relation to the use of 1 single tasks to assess the effects of a training program 2 WM tasks differing from those used in the training to assess the effects of WM training and 3 passive control groups These and other crucial issues have so far prevented any conclusions from being drawn on the efficacy of WM training Bearing in mind that the opportunity to train WM could have a huge impact in the educational and clinical settings it seems fundamentally important to shed more light on the limits and potential of this line of research The aim of the research discussed here is to generate new evidence on the feasibility of training WM in individuals

with LD and ID There are several questions that could be raised in this field For a start can WM be trained in this population Are there some aspects of WM that can be trained more easily than others Can a WM training reduce the impact of LD and ID on learning outcomes and on everyday living What kind of training program is best suited to the promotion of such changes
