The Next Generation David H. Bailey, Jonathan M. Borwein, 2016-07-19 This book contains a compendium of 25 papers published since the 1970s dealing with pi and associated topics of mathematics and computer science The collection begins with a Foreword by Bruce Berndt Each contribution is preceded by a brief summary of its content as well as a short key word list indicating how the content relates to others in the collection The volume includes articles on actual computations of pi articles on mathematical questions related to pi e g Is pi normal articles presenting new and often amazing techniques for computing digits of pi e g the BBP algorithm for pi which permits one to compute an arbitrary binary digit of pi without needing to compute any of the digits that came before papers presenting important fundamental mathematical results relating to pi and papers presenting new high tech techniques for analyzing pi i e new graphical techniques that permit one to visually see if pi and other numbers are normal This volume is a companion to Pi A Source Book whose third edition released in 2004 The present collection begins with 2 papers from 1976 published by Eugene Salamin and Richard Brent which describe quadratically convergent algorithms for pi and other basic mathematical functions derived from some

mathematical work of Gauss Bailey and Borwein hold that these two papers constitute the beginning of the modern era of computational mathematics This time period 1970s also corresponds with the introduction of high performance computer systems supercomputers which since that time have increased relentlessly in power by approximately a factor of 100 000 000 advancing roughly at the same rate as Moore s Law of semiconductor technology This book may be of interest to a wide range of mathematical readers some articles cover more advanced research questions suitable for active researchers in the field but several are highly accessible to undergraduate mathematics students

A Conversation on Professional Norms in Mathematics Pamela E. Harris,Michael A. Hill,Dagan Karp,Emily Riehl,Mathilde Gerbelli-Gauthier,2021-10-19 The articles in this volume grew out of a 2019 workshop held at Johns Hopkins University that was inspired by a belief that when mathematicians take time to reflect on the social forces involved in the production of mathematics actionable insights result Topics range from mechanisms that lead to an inclusion exclusion dichotomy within mathematics to common pitfalls and better alternatives to how mathematicians approach teaching mentoring and communicating mathematical ideas This collection will be of interest to students faculty and administrators wishing to gain a snapshot of the current state of professional norms within mathematics and possible steps toward improvements
