### **Chapter 20 Electric Potential and Electrical Potential Energy Q.1CQ**

In one region of space the electric potential has a positive constant value. In another region of space the potential has a negative constant value. What can be said about the electric field within each of these two regions of space?

**Solution:**

Electric field is related to electric potential by the following relation,  $E = \frac{-\Delta V}{\Delta x}$

This means, electric field is a measure of change in electric potential with change in position.

As the electric potential in each of these two regions is constant with their opposite polarity, so the electric field in both the regions must be zero.

### **Chapter 20 Electric Potential and Electrical Potential Energy Q.1P**

CE An electron is released from rest in a region of space with nonzero electric field. As the electron moves, does it experience an increasing or decreasing electric potential? Explain.

Critical Approaches to Science and Philosophy Mario Bunge, 2018-10-08 This collection of essays written on four continents by scientists philosophers and humanists was initially presented to Karl R Popper on his sixtieth birthday as a token of critical admiration and in recognition of his work But the volume also stands on its own as a remarkable series of statements utilizing Popper's critical vision in the study of philosophy proper logic mathematics science as method and theory and finally to the study of society and history What is remarkable is that Popper worked in all of these areas not in a cursory or discursive way but with the utmost clarity and rigor The core position of this volume and its contributors is that the progress of knowledge is not a linear accumulation of definitive acquisitions but a zigzagging process in which counterexamples and unfavorable evidence ruin generalizations and prompt the invention of more comprehensive and sometimes deeper generalizations to be criticized in their turn A critical approach to problems procedures and results in every field of inquiry is therefore a necessary condition for the continuance of progress The title of this volume then is in a sense an homage to Popper's critical rationalism and critical empiricism The essays are a tribute to his unceasing and uncompromising quest not for final certainty but for closer truth and increased clarity Among the contributors are outstanding figures in philosophy and the exact sciences in their own right including Herbert Feigl R M Hare J O Wisdom Nicholas Rescher David Bohm Paul K Feyerabend F A Hayek and Adolf Grünbaum Social science contributions include Hans Albert on social science and moral philosophy W B Gallie on the critical philosophy of history Pieter Geyl on The Open Society and its Enemies and George H Nadel on the philosophy of History
