

An Object Accelerating on a Ramp

Learning Goal:

Understand that the acceleration vector is in the direction of the change of the velocity vector.

In one dimensional (straight line) motion, acceleration is accompanied by a change in speed, and the acceleration is always parallel (or antiparallel) to the velocity.

When motion can occur in two dimensions (e.g. is confined to a tabletop but can lie anywhere in the x-y plane), the definition of acceleration is

$$\vec{a}(t) = \frac{\vec{v}(t + \Delta t) - \vec{v}(t)}{\Delta t} \text{ in the limit } \Delta t \rightarrow 0.$$

In picturing this vector derivative you can think of the derivative of a vector as an instantaneous quantity by thinking of the velocity of the tip of the arrow as the vector changes in time. Alternatively, you can (for small Δt) approximate the acceleration as

$$\vec{a}(t) \approx \frac{\vec{v}(t + \Delta t) - \vec{v}(t)}{\Delta t}.$$

Obviously the difference between $\vec{v}(t + \Delta t)$ and $\vec{v}(t)$ is another vector that can lie in any direction. If it is longer but in the same direction, $\vec{a}(t)$ will be parallel to $\vec{v}(t)$. On the other hand, if $\vec{v}(t + \Delta t)$ has the same magnitude as $\vec{v}(t)$ but is in a slightly different direction, then $\vec{a}(t)$ will be perpendicular to \vec{v} . In general, $\vec{v}(t + \Delta t)$ can differ from $\vec{v}(t)$ in both magnitude and direction, hence $\vec{a}(t)$ can have any direction relative to $\vec{v}(t)$.

This problem contains several examples of this. Consider an object sliding on a frictionless ramp as depicted here. The object is already moving along the ramp toward position 2 when it is at position 1. The following questions concern the direction of the object's acceleration vector, \vec{a} . In this problem, you should find the direction of the acceleration vector by drawing the velocity vector at two points near to the position you are asked about. Note that since the object moves along the track, its velocity vector at a point will be tangent to the track at that point. The acceleration vector will point in the same direction as the vector difference of the two velocities. (This is a result of the equation $\vec{a}(t) \approx (\vec{v}(t + \Delta t) - \vec{v}(t))/\Delta t$ given above.)

Part A

Which direction best approximates the direction of \vec{a} when the object is at position 1?

Hint 1: Consider the change in velocity

At this point, the object's velocity vector is not changing direction; rather, it is increasing in magnitude. Therefore, the object's acceleration is nearly parallel to its velocity.

ANSWER:

- ☐ straight up
- ☐ downward to the left
- ☒ downward to the right

Mastering Physics Answers Chapter 5:

Our Sacred Source Andrew Kneier, 2021-01-05 Life is not a cakewalk for any of us. We each have our individual sufferings and challenges in life and we each must endure vital questions that have no certain answers. Why are we here? Where is God when we need him? How do our lives matter in the long run? Our science cannot help us with such questions, but theology can. And that's what this book has to offer. This book's theology is based on an arresting theory about God. Turning to modern physics, it finds God in the origin of the universe and in the innermost foundations of the natural world. The universe flowed from his nature, but his nature was not perfect, which is why we have an imperfect world where bad things happen to good people. And yet we also find this God deep within us, enabling us to confront our suffering with resilience and grace. The evil in the world has power, but we have power too: the power from our inner God to hold steady against the slings and arrows of our misfortunes. The theology presented here builds on the discoveries of particle physics and quantum mechanics about the foundational building blocks and forces in all of creation. These reveal the abounding spirit and purposes of the Creator, a spirit that empowers us and instills in us purposes we can embrace and foster. It may seem we are essentially on our own as we navigate through life, but in this book's theology, God is always and everywhere with us and in us. **Essential**
