## KACR (Kawasaki) Automatic Compression Release Inspection

KACR [A] is installed on the left end of the exhaust camshaft [B]. Do not remove or disassemble KACR alone. (Since KACR is the simple construction, it does not require periodic maintenance. The KACR mechanism may develop two types of failure. They are failing to release compression pressure in starting the engine and releasing compression pressure while the engine is running.

- When compression pressure in the cylinder is not released in starting the engine (an error event), the pin [A] remains in the cam [B], so that the exhaust valve is not pushed down, which results in hard starting due to difficulty to increase the crank shaft rotation speed.
- Visually inspect the spring [C].
- If the spring is damaged, deformed or lost, replace it.
- Remove the spring, and move the weights [D] and [E] back and forth.
- If the weights do not move freely, replace the exhaust camshaft and KACR as a set.
