STE*M: STEM Education for All Marie-Louise Botha,Hanne Deprez,Oliver Holz,Robin Schaefferbeke,2025 STEM education which encompasses Science Technology Engineering and Mathematics is of paramount importance in the 21st century Currently there is a global call for a technologically skilled workforce for the 21st century workplace related to scarce skill subjects such as Mathematics Science ICT and Arts Furthermore these skills and jobs are not promoted effectively in wider communities In this era of rapid technological advancements and complex global challenges including a shortage of qualified STEM educators and under resourced schools STEM education is essential It equips individuals with critical skills for success through collaborative and interdisciplinary approaches The asterisk in STEM reflects its evolving nature promoting interdisciplinary collaboration to develop critical skills needed in a rapidly changing technology driven world The scope of the book is multi faceted and explores a range of practices and research contexts such as student STE M stimulated experiences transdisciplinarity diversity and inclusion in STE M education and science teaching in primary and secondary schools The contributions show different perspectives from Belgium Botswana Germany Namibia South Africa and the United States of America

Research for Educational Change Jill Adler,Anna Sfard,2016-06-17 Research for

Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research
