Natural Products: Research Reviews Vijay Kumar Gupta, 2012-01-01

Natural products, particularly microbial and plant products in their native form, have been associated with mankind since ancient times. Natural products offer a vast, virtually untapped reservoir of chemical compounds with many potential uses. Apart from drugs, they can also be used as lead compounds, dietary supplements, and personal care items. The present volume of the book series entitled *Natural Products Research Reviews* is a critical review book which stimulates progress in all areas of natural products research. The book gives an excellent overview of the current trends in natural product research. This is an interesting and authoritative volume as a collection of monographic chapters on specific problems regarding natural products for maintenance of health as well as in the prevention and treatment of diseases. Each chapter contains in depth account of the materials covered, involving mainly the chemistry and pharmacology of natural products as well as the use of new tools for purity evaluation. It presents current frontiers and future guidelines for research based on important discoveries made in the field of natural products and presents 12 review chapters from eminent scientists in India and abroad. The interesting reviews included in this publication are: Diabetes and medicinal plants in Portugal; Immunotherapeutic targeting of multiple dysregulated immune functions in cancer by neem leaf glycoprotein; Misteltoe lectins in cancer therapy; Administration by the oral route or by subcutaneous injection; A review; Phytochemical profile of *Aegle marmelos* Family Rutaceae; Supercritical fluid extraction as a tool for value addition of natural products; Phytochemistry of the genus *Croton*; Anti amyloidogenic effect of natural products; Implications for the prevention and therapeutics of Alzheimer's disease; An overview of *Acmella oleracea*, a multipurpose species; Effect of natural plant based and non steroidal anti inflammatory drugs on the immune system; Inorganic composition of medicinal plants; Medicinal plants for management of anxiety; Review on medicinal properties of onions and garlic. We hope that this volume shall generate further

database and interest for the benefit of academicians researchers and scientists working on natural products who shall find the volume very useful and indispensable in their relevant research pursuits **Natural Products** Vijay Kumar Gupta, 2012

Dynamic Aspects Of Natural Products Chemistry Takeshi Ogura, 1997-11-21 Preface Natural products chemistry has a long history and could be regarded as having its roots in the use of many kinds of herbal mixtures as crude drugs in traditional medicine Systems of traditional medicine have been practiced in China and Japan for thousands of years and virtually all regions of the world have used natural materials to treat human disease It was clear that many plants herbs etc contain components with powerful biological activities The dawn of modern natural products chemistry began with the isolation of the active component morphine from opium Subsequently various alkaloids were isolated from medicinal plants and employed clinically The discovery and the development of penicillin as a microbial metabolite opened up the era of antibiotics which have saved countless lives in the past half century or so The isolation and synthesis of steroid hormones resulted in the development of new concepts in molecular stereochemistry and organic synthetic techniques as did the discovery of bioactive lipids such as prostaglandins and leukotrienes bioactive peptides such as enkephalins and endorphins and oligosaccharides including glycoproteins Further the discovery of plant hormones has led to great strides in plant biotechnology including plant tissue cultures and derivatives of insect hormones and pheromones are now used as pesticides Thus applications of natural products chemistry have become all pervasive in modern society Apart from the extensive practical applications of natural products and their derivatives natural products chemistry has played a central role in the development of modern organic chemistry as a result of its focus on structural and synthetic studies of often highly complex and inaccessible molecules Biosynthetic studies have also attracted much attention aiming to answer the questions of why and how such a large number and variety of compounds are synthesised by organisms Researchers in the field of biosynthesis first focused on elucidation of the pathways of secondary metabolism and then on the mechanisms of the enzymes catalyzing the biosynthetic reactions This was an extremely difficult task because rather large amounts of enzymes are required for the investigation of reaction mechanisms and the enzyme proteins are often unstable and not easy to purify However in recent years the development of molecular biology has made gene and protein engineering rather routine Thus studies of mechanistic enzymology can now be conducted with cloned and overexpressed enzyme proteins It has been shown that the enzymes responsible for the biosynthesis of antibiotics in *Streptomyces* spp are encoded in gene clusters Further cloning and functional analysis of the genes associated with flavonoid biosynthesis should soon cast light on the interesting question of why flavonoids are ubiquitously present in plant leaves Life is maintained not only by large molecules such as proteins and nucleic acids but also by many small molecules which have essential and diverse roles in the physiology of living organisms Such compounds often have highly specific interactions with target receptors but the mechanisms involved largely remain to be explored Current methodology means that this task can be addressed and this in turn should lead to a host of

new applications for natural products and their derivatives The key may be an interdisciplinary approach taking account of both biological function and molecular behaviour based on precise structure recognition As we increasingly understand the mechanisms of molecular recognition that operate in nature many possibilities should open up for artificial control or modification of biological functions as well as new challenges for synthetic organic chemists Our intention in this book is to focus on such dynamic aspects of natural products chemistry By dealing in detail with representative topics to which the most modern techniques of research have been applied we hope to emphasize the value of combining traditional approaches to natural products chemists with current biochemical and molecular biological ideas Each chapter provides sufficient background information and experimental detail to make the subject accessible to non specialists It is our hope that these examples of recent progress in key areas of natural products chemistry will stimulate work in related topics by illustrating the power of a modern interdisciplinary approach to the subject

New Tide of Natural Product Chemistry Hayato Ishikawa, Hiromitsu Takayama, 2024-06-21 This book highlights recent research and advances in natural product chemistry written by promising young researchers in this field who have played a central role for recent innovative advancements The book consists of seventeen chapters covering novel bioactive natural products uncovering life phenomena with natural products biosynthesis of natural products total synthesis of complex natural products by innovative strategies and drug discovery using natural products Each chapter begins with a brief and easy to understand introduction then presents the cutting edge research in each individual specialty This book is not only a practical and essential reference resource for natural product chemists medicinal chemists synthetic organic chemists biochemists pharmacologists as well as the pharmaceutical and biotechnological industries but is also a useful guide to understanding new and emerging trends in this field

Natural Products and Human Diseases Amirhossein Sahebkar, Thozhukat Sathyapalan, 2022-01-05 Natural products have a long history of use as folk medicines in several systems of traditional medicine Extensive evidence from modern pharmacological studies has confirmed traditional applications and unveiled the vast potential of naturally occurring compounds particularly plant derived phytochemicals in the management of chronic human diseases The past decade has witnessed a surge of findings from randomized controlled trials testifying the safety and efficacy of natural products as adjuncts or alternatives to standard of care medications for several illnesses Biomolecular studies have unveiled hundreds of cellular and molecular targets for phytochemicals including key transcription factors receptors enzymes hormones neurotransmitters cytokines lipids and non coding RNAs Extensive research on the preventative and therapeutic effects of natural products necessitates regular updating of the literature as to the developing potential roles of these compounds in different human diseases This new book provides an overview of the current pharmacological and clinical features of natural products and the role of phytopharmaceutical compounds in health and diseases Chapters cover a wide scope from cancers to chronic and age related disorders and are written by leading international subject experts Collectively chapters will

provide useful insights on the regulatory effects of phytochemicals and nutraceuticals on pathogenic molecular signatures associated with pathologies disease biomarkers and aging related pathways
