Natural Science Grade 9 November 2013:

Nanocosmetics Arun Nanda, Sanju Nanda, Susai Rajendran, Yassine Slimani, Tuan Anh Nguyen, 2020-05-06

Nanotechnology is key to the design and manufacture of the new generation of cosmetics. Nanotechnology can enhance the performance and properties of cosmetics including colour, transparency, solubility, texture, and durability. Sunscreen products such as UV nano filters, nano TiO₂ and nano ZnO particles can offer an advantage over their traditional counterparts due to their broad UV protection and non cutaneous side effects. For perfumes, nano droplets can be found in cosmetic products including Eau de Toilette and Eau de Parfum. Nanomaterials can also be used in cosmetics as transdermal drug delivery systems. By using smart nanocontainers, active compounds such as vitamins, antioxidants, nutrients, and anti-inflammatory/anti-infective agents can be delivered effectively. These smart nanocontainers are typically related with the smart releasing property for their embedded active substances. These smart releases could be obtained by using the smart coatings as their outer nano shells. These nano shells could prevent the direct contact between these active agents and the adjacent local environments. *Nanocosmetics: Fundamentals, Applications and Toxicity* explores the formulation design concepts and emerging applications of nanocosmetics. The book also focuses on the mitigation or prevention of their potential nanotoxicity, potential global regulatory challenges, and the technical challenges of mass implementation. It is an important reference source for materials scientists and pharmaceutical scientists looking to further their understanding of how nanotechnology is being used for the new generation of cosmetics. Outlines the major fabrication and formulation design concepts of nanoscale products for cosmetic applications. Explores how nanomaterials can safely be used for various applications in cosmetic products. Assesses the major challenges of using nanomaterials for cosmetic applications on a large scale. *Plant Genetic Resources, Inventory, Collection and Conservation* Siva Ramamoorthy, Inocencio Jr. Buot, Rajasekaran

Chandrasekaran, 2022-06-22. This edited book deals with plant genetic resources and their status, availability, and ecological niche in natural habitat. Usage and conservation practices followed by various tribal communities and their rationale are also discussed in the book. The book explores application of biological tools to conserve plant species and optimization protocols for conservation and elicitation of secondary metabolites and other value addition products. The book is organized into sub-themes covering: i) Ecological status of plant genetic resources; ii) Traditional ethnobotanical knowledge and conservation practices; iii) Ex situ conservation practices and bioprospecting. Globally, plant genetic resources are deeply rooted in culture and economy. Since the early 1990s, the changing socio-economic situation has increasingly put pressure on plant genetic resources in some cases, leading to a severe loss of their diversity. For this reason, most vulnerable areas at risk of genetic erosion have been demarcated and protected by forest laws and regulations. Therefore, this book brings to light the opinions of leading experts in the area of ecology, conservation, biodiversity, ethnobotany, and bioprospecting of plant genetic resources. The book is for use by graduate and advanced undergraduate students and researchers in plant physiology.
