- The outside phone cannot find the outside network
  - Check whether the outside phone is connected to a net
  - Check the value of `IP` field from net if it is abnormal? If the outside network will connect from host after waiting phone (i.e. phone cannot call the network and the network cannot connect phone)
- There is something wrong with the outside network while using it
  - Please try to connect with the outside phone after waiting it (i.e. not waiting the network)
  - Check the changing value of the network by getting from the changing the ip of the net (i.e. network) (i.e. Then you can see what the network is connected with the outside phone)

- The wireless network always disconnects or fails when often connected to the mobile device.
- The wireless network point cannot be set (cannot change IP).
- There is an interference between the mobile device and the wireless network, or the wireless device is located near a noisy device. Please do not use the wireless network with your laptop in order to maximize the continuous capacity of the wireless network. It is best the wireless network and the mobile device in the same direction.
