Morfill,M. Scholer,2012-12-06 This book is the result of a

meeting held in August 1986 in Irsee West Germany As the title suggests the aim of the meeting was to discuss physical processes in interstellar clouds determine the current status aims and future direction of the research in this area

Interstellar clouds contain nearly all the mass of diffuse gas in our galaxy some 10% of the total galactic mass They represent

the birth site for stars and the final dumping ground for matter ejected from stars winds explosive ejecta and thus play an integral part in the galactic recycling of material Not only are the clouds important for the structure and evolution of our galaxy they are also interesting objects of study per se Because of their vast scales up to about 100 parsec extreme temperatures as low as about 100 K and long life 8 times estimated a about 10 years a number of physical and chemical processes occur in these environments which we are not able to study elsewhere certainly not in laboratories It is for this reason that the meeting and hence this book was organized in such a way that firstly the latest observational results were summarized going from the global large scales to finer details and dynamics then progressing onwards to the processes dynamical chemical electromagnetic etc
