Data Science and Social Research N. Carlo Lauro, Enrica Amato, Maria Gabriella Grassia, Biagio Aragona, Marina Marino, 2017-11-17 This edited volume lays the groundwork for Social Data Science, addressing epistemological issues, methods, technologies, software, and applications of data science in the social sciences. It presents data science techniques for the collection, analysis, and use of both online and offline new big data in social research and related applications. Among others, the individual contributions cover topics like social media, learning analytics, clustering, statistical literacy, recurrence analysis, and network analysis. Data science is a multidisciplinary approach based mainly on the methods of statistics and computer science, and its aim is to develop appropriate methodologies for forecasting and decision making in response to an increasingly complex reality often characterized by large amounts of data: big data of various types (numeric, ordinal, and nominal variables), symbolic data, texts, images, data streams, multi-way data, social networks, etc., and from diverse sources. This book presents selected papers from the international conference on Data Science Social Research held in Naples, Italy, in February 2016 and will appeal to researchers in the social sciences working in academia as well as in statistical institutes and offices.
