Biologically Active Peptides Fidel Toldra, Jianping Wu, 2021-06-17 *Biologically Active Peptides From Basic Science to Applications for Human Health* stands as a comprehensive resource on bioactive peptide science and applications. With contributions from more than thirty global experts, topics discussed include bioactive peptide science, structure-activity relationships, best practices for their study and production, and their applications. In the interdisciplinary field of bioactive peptides, this book bridges the gap between basic peptide chemistry and human physiology while reviewing recent advances in peptide analysis and characterization. Methods and technology-driven chapters offer step-by-step guidance in peptide preparation from different source materials, bioactivity assays, analysis, and identification of bioactive peptides encoding bioactive peptides. Later, applications across disease areas and medical specialties are examined in depth, including the use of bioactive peptides in treating obesity, diabetes, osteoporosis, mental health disorders, food allergies, and joint health, among other disorders, as well as bioactive peptides for sensory enhancement, sports, and clinical nutrition, lowering cholesterol, improving cardiovascular health, and driving advances in biotechnology. Discusses the latest advances in bioactive peptide chemistry, functionality, and analysis. Offers step-by-step instruction in applying new technologies for peptide extraction, protection, production, and encoding, as well as employing bioactive peptide sequencing and bioactivity assays in new research. Effectively links basic peptide chemistry, human biology, and disease. Features chapter contributions from international experts across disciplines and applications.

**Branching and Rooting Out with a CT Scanner: The Why, the How, and the Outcomes, Present and Possibly Future** Pierre Dutilleul, Jonathan A. Lafond, 2016-04-13 Until recently, a majority of the applications of X-ray computed tomography (CT) scanning in plant sciences remained descriptive; some included a quantification of the plant materials when the root-soil isolation or branch-leaf separation was satisfactory, and a few involved the modeling of plant biology processes or the assessment of treatment or disease effects on plant biomass and structures during growth. In the last decade, repeated CT scanning of the same plants was reported in an increasing number of studies in which moderate doses of X-rays had been used. Besides the general objectives of *Frontiers in Plant Science*, research topics *Branching and Rooting Out with a CT Scanner* was proposed to meet specific objectives: i) providing a non-technical update on knowledge about the application of CT scanning technology to plants, starting with the type of CT scanning data collected (CT images vs. CT numbers) and their processing in the graphical and numerical approaches; ii) drawing the limits of the CT scanning approach, which because it is based on material density, can distinguish materials with contrasting or moderately overlapping densities (e.g., branches vs. leaves, roots vs. non-organic soils) but not the others (e.g., roots vs. organic soils); iii) explaining, with a sufficient level of detail, the main procedures used for graphical, quantitative, and statistical analyses of plant CT scanning data, including fractal complexity measures and statistics appropriate for repeated plant CT scanning in experiments where the research hypotheses are about biological processes such as light interception by canopies, root

disease development and plant growth under stress conditions iv comparing plant CT scanning with an alternative technology that applies to plants such as the phenomics platforms which target leaf canopies and v providing current and potential users of plant CT scanning with up to date information and exhaustive documentation including clear perspectives and well defined goals for the future for them to be even more efficient or most efficient from start in their research work

*Greenhouse Gas Emissions and Mitigation: Microbes, Mechanisms and Modeling* Baoli Zhu,Yong Li,Zengmin Chen, Hangwei Hu, Andrian-Stefan Andrei, 2024-05-29 Currently the global average temperature is projected to increase by 0.2 C per decade due to past and ongoing greenhouse gas GHG emissions To limit global warming to 1.5 C above pre industrial levels not only does carbon dioxide CO<sub>2</sub> emission need to reach net zero around 2050 but the emissions of other GHGs also have to reduce substantially Nitrous oxide N<sub>2</sub>O and methane CH<sub>4</sub> are very important GHGs and their global warming potentials are 300 and 25 times that of CO<sub>2</sub> over a 100 year time scale Since pre industrial times atmospheric N<sub>2</sub>O concentrations have increased by more than 20% and CH<sub>4</sub> concentrations have nearly tripled to the current 1900 ppb Studies have suggested that the ongoing increase of atmospheric N<sub>2</sub>O and CH<sub>4</sub> emissions is mostly attributed to microbial activities
