Process of Evolution

After finishing reading this chapter, you should be able to:

- Describe contributions to our understanding of how life on Earth has changed over time.
- How genetic mutations and variations in traits are important for natural selection to occur.
- How the theory of evolution explains the great variety and commonality of all lifeforms on Earth.

Consider at this time of life.... what the planet has gone through in the thousands of years since its origin. A beginning, middle, and end that are wonderful from start, and are being revised.

How the theory of evolution explains the great variety and commonality of all lifeforms on Earth.

Evolution

Have you ever noticed a building wall or a tree trunk covered with ivy? If you're close to it, you will notice groups of leaves, mostly about every 40 centimeters along the stem. You may already know from experience that a plant's roots usually grow in the soil. There they anchor the plant in the soil and take in water and food for the plant. Ivy plants have roots that grow in the ground, but they also produce roots along their stems. These roots are called aerial roots. They may wonder what function these roots have. The aerial roots of a plant, whether in soil, the ivy is a wall or tree trunk. In fact, it has roots that enable the ivy to climb up from the ground. (See page 4.)

Questions may come to mind at this point. How did ivy come to be this special type of ivy? How did ivy plants develop an ability to have the ability to climb high on a tree trunk?
