Mathematics in Action Consortium for Foundation Mathematics, 2003-12. This introductory algebra text based on standards in the AMATYC Crossroads document motivates college math students to develop mathematical literacy and a solid foundation for future study in mathematics and other disciplines. This second book of a three book series presents mathematical concepts and skills through relevant activities derived from real life situations; these activities are meaningful to students because they illustrate how mathematics arises naturally from real world situations and problems. The *Mathematics in Action* series is based on the assumption that students learn mathematics best by doing mathematics in a meaningful context. Students take an active role in their own learning by working in groups, thereby developing communication skills, a sense of independence, and a can-do attitude about mathematics. Technology is integrated throughout the book so that students learn to interpret real life data numerically, symbolically, and graphically. Regardless of their level of preparation for the course, students can use this text to increase their knowledge of mathematics, their problem solving skills, and their overall confidence in their ability to learn. *Beginning and Intermediate Algebra* Margaret L. Lial, E. John Hornsby, John Hornsby, Terry McGinnis, 2003-04. The Lial series has helped thousands of students succeed in developmental mathematics through its friendly writing style, numerous realistic examples, extensive problem sets, and complete supplements package. In keeping with its proven track record, this revision includes a new open design, more exercises, and applications and additional features to help both students and instructors succeed. **Beginning Algebra with Applications and Visualization** Gary K. Rockswold, Terry A. Krieger, 2004-10. *Beginning Algebra with Applications and Visualization* offers an innovative approach to the beginning algebra curriculum that allows students to gain both skills and

understanding This text not only prepares students for future mathematics courses but it also demonstrates to students the relevance of mathematics Real data graphs and tables play an important role in the course giving meaning to the numbers and equations that students encounter This approach increases student interest motivation and the likelihood for success Many students think in visual concrete terms and not abstractly This text helps students learn mathematics better by moving from the concrete to the abstract It makes use of multiple representations verbal graphical numerical and symbolic applications visualization and technology Geometry Helen R.
