Motion And Forces Test Year 7:

The Induced Forces and Motions of a Tumblehome Hullform (Model 5613) Undergoing Forced Roll Anne M.

Fullerton, Thomas C. Fu, Don C. Walker, James R. Rice, Young S. Hong, 2006 Predictions of large amplitude roll motions and capsize events have proven to be difficult and include large uncertainty One of the reasons for this is a lack of knowledge of resultant forces and moments for large roll angles Currently the equations used by numerical models to predict forces and moments due to roll motion are based on experimental data performed within a small range of roll amplitudes A data set of forces and moments is necessary to verify that the model predictions are accurate in the upper ranges or to develop new models to predict the forces and moments for these larger roll amplitudes In 2005 the Naval Surface Warfare Center Carderock Division tested NSWC Model 5613 a tumblehome hullform with the primary objective of obtaining model scale constrained seakeeping results to provide information necessary to perform verification of surge sway heave forces and motions and roll pitch and yaw moments and motions acting on a surface combatant hull during large amplitude motions and capsize events This report describes the testing and the resultant acquired data and begins to establish a database defining non linear forces and moments associated with large amplitude motions and capsize events

Concepts of Matter in Science Education Georgios Tsaparis, Hannah Sevian, 2013-07-09 Bringing together a wide collection of ideas reviews analyses and new research on particulate and structural concepts of matter Concepts of Matter in Science Education informs practice from pre school through graduate school learning and teaching and aims to inspire progress in science education The expert contributors offer a range of reviews and critical analyses of related literature and in depth analysis of specific issues as well as new research Among the themes covered are learning progressions for teaching a particle model of matter the mental models of both students and teachers of the particulate nature of matter educational technology chemical reactions and chemical phenomena chemical structure and bonding quantum chemistry and the history and philosophy of science relating to the particulate nature of matter The book will benefit a wide audience including classroom practitioners and student teachers at every educational level teacher educators and researchers in science education If gaining the precise meaning in particulate terms of what is solid what is liquid and that air is a gas were that simple we would not be confronted with another book which while suggesting new approaches to teaching these topics confirms they are still very difficult for students to learn Peter Fensham Emeritus Professor Monash University Adjunct Professor QUT from the foreword to this book
