High-Energy Astrophysics Research Enabled By The Probe-Class Mission Concept HEX-P Gabriele Ponti, Murray Brightman, Esra Bulbul, Renee Ludlam, Daniel Stern, Javier A. García, 2025-06-02 The Astro 2020 Decadal report Pathways to Discovery in Astronomy and Astrophysics for the 2020s identified the need for a new class of mission for the next decade that fills the gap between a Mid-sized Explorer MIDEX and Flagship Large mission. The report specifically recommends that a cadence of one probe mission per decade with a cost cap of 1.5 billion balances scientific scope with timeliness. NASA has followed this recommendation and opened a call for Astrophysics Probe Explorer APEX proposals restricted to either a far infrared or an X-ray mission due in Fall 2023 with a planned launch date in no later than 2032. In response to this call the High Energy X-ray Probe HEX-P concept has been developed as a partnership between NASA's Jet Propulsion Laboratory JPL, the California Institute of Technology Caltech and the NASA Goddard Space Flight Center GSFC with international partnership from the Italian Space Agency ASI Italy, the German Space Agency DLR and the Max Planck Institute for Extraterrestrial Physics MPE Germany. HEX-P is a mission concept that offers sensitive broad band coverage from soft to hard X-rays 0.2-80 keV with an exceptional combination of spectral timing and angular capabilities. It features two high energy telescopes HETs that focus hard X-rays and one low energy telescope LET that focuses lower energy X-rays.

building upon the heritage of previous successful missions such as XMM Newton and NuSTAR With this leap in observational capability HEX P will be capable of addressing fundamental questions about the extreme environments around black holes and neutron stars map the growth of supermassive black holes and quantify the effect they have on their environments HEX P will resolve the hard X ray emission from dense regions of our Galaxy to understand the high energy source populations and investigate dark matter candidate particles through their decay channel signatures In this Frontiers Research Topic we present a collection of papers which delve into some of the most exciting scientific questions that can be addressed with a mission like HEX P The papers have been prepared by members of the HEX P collaboration which is organized into four main scientific pillars Black Hole Growth Accretion Power Stellar Evolution Time Domain and Multi Messenger Astronomy The individual papers cover a range of topics including The cosmic X ray background Seyfert galaxies Compton thick active galaxies and blazars Black hole binaries neutron stars magnetars ultraluminous X ray sources and tidal disruption events The physics of the X ray corona X ray populations in nearby galaxies Supernova remnants pulsar wind nebulae and nuclear astrophysics Galactic PeVatrons star clusters superbubbles microquasar jets and gamma ray binaries The Galactic Center Supermassive black spin measurements and dual active galaxies Pulsar Timing electromagnetic counterparts of gravitational wave sources and transient phenomena The main goal of this Research Topic is to present detailed modeling and simulations for a range of HEX P science cases in order to demonstrate the capabilities of HEX P in serving the astrophysics community in the next decade The members of the HEX P mission are welcome to present Original Research papers as well as any other kind of article types that fit their manuscript Please have a look at [here](#) to choose the appropriate article type to submit to this collection This Research Topic is organized by the researchers of the HEX P mission Authors and Guest Editors belong to the same consortium Furthermore Dr Daniel Stern and Dr Javier Garcia are the Principal Investigator and the Project Scientist of the mission respectively All manuscripts will be peer reviewed by researchers external to the collaboration

of improving student learning and outcomes at least somewhat simpler They do this by describing and illustrating improvement steps that they have found to work in practice providing examples from their work in schools to show the application of these ideas If implemented properly the cycles become self propelling thus reducing the cognitive load involved in planning how to improve A range of evidence from international research and the authors own research and development work in schools explains the cycle and illustrate it The book is entitled It s Not Rocket Science because this is the common reaction from leaders once they understand the improvement cycle process The book is perfect for a variety of courses in Education Leadership Professional Development and any other curriculum devoted to improving schools and student performance Perfect for courses such as Educational Leadership Professional Development *Academy; a Weekly Review of Literature, Learning, Science and Art* ,1890 The Poetical gazette the official organ of the Poetry society and a review of poetical affairs nos 4 7 issued as supplements to the Academy v 79 Oct 15 Nov 5 Dec 3 and 31 1910 **Popular Science** ,1994-12 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better Popular Science ,1943-11 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better **The Engineer** ,1877 Carbon Monoxide Poisoning United States.
