Fujimura, 1996 During the late 1970s and 1980s cancer underwent a remarkable transformation In one short decade what had long been a set of heterogeneous diseases marked by uncontrolled cell growth became a disease of our genes How this happened and what it means is the story Joan Fujimura tells in a rare inside look at the way science works and knowledge is created A dramatic study of a new species of scientific revolution this book combines a detailed ethnography of scientific thought an in depth account of science practiced and produced a history of one branch of science as it entered the limelight and a view of the impact of new genetic technologies on science and society The scientific enterprise that Fujimura unfolds for us is proto oncogene cancer research the study of those segments of DNA now thought to make normal cells cancerous Within this framework she describes the processes of knowledge construction as a social enterprise an endless series of negotiations in which theories material technologies and practices are co constructed incorporated and refashioned Along the way Fujimura addresses long standing questions in the history and philosophy of science culture theory and sociology of science How do scientists create good problems experiments and solutions What are the cultural institutional and material technologies that have to be in place for new truths and new practices to succeed Portraying the development of knowledge as a multidimensional process conducted through multiple cultures institutions

actors objects and practices this book disrupts divisions among sociology history anthropology and the philosophy of science technology and medicine Recombinant DNA Technology Aleš Prokop, The Alzheimer's Solution Kenneth S. Kosik, M.D., Ellen Clegg, 2010-04-27 The solution research neurologist Kosik and medical journalist Clegg propose reads like the opening round in what they clearly hope will become a national dialogue about optimizing treatment for people with dementia including Alzheimer's disease Cogent thorough and convincing BooklistAs the Baby Boomer generation moves into the ranks of the elderly in the next decade or two the number of Alzheimer cases expected to develop will be staggering Since current medical care cannot offer a cure and even significantly effective treatment is at least ten years away there is a pressing need for novel solutions to address the multifaceted issues raised by this devastating disease This book offers a measure of hope and coping strategies for people facing Alzheimer's now or in the future Authors Kenneth S Kosik MD a neurologist and a leading Alzheimer's researcher and experienced healthcare journalist Ellen Clegg propose the creation of community centers devoted to Alzheimer's Here patients and their families could access programs of care treatment and most importantly prevention outside of the traditional medical setting They outline a bold vision of one stop centers that would provide expertise and reliable information on a range of topics pharmaceutical developments dietary regimens physical and cognitive exercise programs that may help to slow the disease process and palliative measures to reduce suffering Most important the centers they describe would take a family oriented personalized approach to care and prevention creating an atmosphere conducive to adult learning and facilitating personal growth in areas that patients have enjoyed over a lifetime including the arts dance socializing and a host of other possibilities The authors explain why the current healthcare system is poorly equipped to deal with Alzheimer patients why the standard medical model is inappropriate for cognitive disorders how market economics stymies physician creativity and how new initiatives that work outside the existing system could go a long way toward providing the help that is lacking today For people prepared to take action now to prevent Alzheimer's as well as healthcare professionals seeking ways to help their patients this book is a must read Kenneth S Kosik MD Santa Barbara CA is the Harriman Chair in Neurosciences co director of the Neuroscience Research Institute and professor in the Department of Molecular Cellular and Developmental Biology at the University of California Santa Barbara Previously Dr Kosik was professor of neurology and neuroscience at Harvard Medical School Ellen Clegg Boston MA is Managing Editor for Communications Platforms at the Broad Institute of MIT and Harvard a genetic research center in Cambridge Massachusetts Previously she was Deputy Managing Editor News Operations of the Boston Globe Her prior positions at the Globe include Sunday editor and health and science editor She is the author of ChemoBrain How Cancer Therapies Can Affect Your Mind **Gene Jockeys** Nicolas Rasmussen, 2014-05-15 The scientific scramble to discover the first generation of drugs created through genetic engineering The biotech arena emerged in the 1970s and 1980s when molecular biology one of the fastest moving areas of basic science in the twentieth century met the business

world Gene Jockeys is a detailed study of the biotech projects that led to five of the first ten recombinant DNA drugs to be approved for medical use in the United States human insulin human growth hormone alpha interferon erythropoietin and tissue plasminogen activator Drawing on corporate documents obtained from patent litigation as well as interviews with the ambitious biologists who called themselves gene jockeys historian Nicolas Rasmussen chronicles the remarkable and often secretive work of the scientists who built a new domain between academia and the drug industry in the pursuit of intellectual rewards and big payouts In contrast to some who critique the rise of biotechnology Rasmussen contends that biotech was not a swindle even if the public did pay a very high price for the development of what began as public scientific resources Within the biotech enterprise the work of corporate scientists went well beyond what biologists had already accomplished within universities and it accelerated the medical use of the new drugs by several years In his technically detailed and readable narrative Rasmussen focuses on the visible and often heavy hands that construct and maintain the markets in public goods like science He looks closely at how science follows money and vice versa as researchers respond to the pressures and potential rewards of commercially viable innovations In biotechnology many of those engaged in crafting markets for genetically engineered drugs were biologists themselves who were in fact trying to do science This book captures that heady fleeting moment when a biologist could expect to do great science through the private sector and be rewarded with both wealth and scientific acclaim

Company, Judith Giles Morgan, 1994-02 **Cancer Virus Hunters** Gregory J. Morgan, 2022-08-02 Traces the history of the study of tumor viruses and its role in driving breakthroughs in cancer research Worldwide approximately one fifth of human cancers are caused by tumor viruses with hepatitis B virus and HPV being the leading culprits While the explosive growth in molecular biology in the late twentieth century is well known the role that the study of tumor viruses has played in driving many of the greatest breakthroughs is not Without the insights gained by studying tumor viruses many significant theoretical advancements over the last four decades in cellular and molecular biology would not have been made More practically the study of tumor viruses has saved thousands if not millions of lives In Cancer Virus Hunters Gregory J Morgan traces the high points in the development of tumor virology from Peyton Rous's pioneering work on chicken tumors in 1909 to the successful development of an HPV vaccine for cervical cancer in 2006 Morgan offers a novel approach to understanding the interconnectedness of a long series of biomedical breakthroughs including those that led to seven Nobel prizes Among other advances Morgan describes and contextualizes the science that prompted the discoveries of reverse transcriptase RNA splicing the tumor suppressor p53 the vaccine for hepatitis B and the HIV test He also explores how cancer virus hunters have demonstrated the virtue of beginning with a simple system even when investigating a complex disease like cancer Based on extensive archival research and over fifty interviews with experts Cancer Virus Hunters is a tour de force summarizing a century of research to show how discoveries made with tumor viruses came to dominate the contemporary
