A Compendium of Neuropsychological Tests Elisabeth Sherman, Jing Tan, Marianne Hrabok, 2023-04-25 The Compendium is an essential guidebook for selecting the right test for specific clinical situations and for helping clinicians make empirically supported test interpretations. It is revised and updated. It covers over 85 test reviews of well-known neuropsychological tests and scales for adults. It includes tests of premorbid estimation, dementia screening, IQ, attention, executive functioning, memory, language, visuospatial skills, sensory function, motor skills, performance validity, and symptom validity. It covers basic and advanced aspects of neuropsychological assessment, including psychometric principles, reliability, test validity, and performance, symptom validity testing. *Multifaceted Assessment for Early Childhood Education* Robert J. Wright, 2010 Multifaceted Assessment in Early Childhood is ideal for those on upper division undergraduate courses and first level graduate courses in early childhood education assessment. The book covers the various measures used in a range of assessment dimensions and includes valuable information regarding young children with special needs and English Language Learners, which has rarely been touched upon in other textbooks. The chapters are focused on student accessibility and include practical applications of key concepts. Features and benefits: Covers a range of assessment concepts including Formative uses feedback from learning to adapt teaching. Summative i.e. tests, quizzes. Authentic focuses on complex, deeper tasks. Standardized STAR SAT. Includes coverage of assessment for English language learners and children with special needs, topics that are not provided enough coverage in other books, including Wortham, McAfee, Puckett, and Mindes. Wright's writing style grabs and engages the reader in the topic. Two of our reviewers who use Wortham specifically cited Wright's writing style as a reason they would adopt our book. A McAfee reviewer is likely to switch for the same reason. **The Evolution of Rhythm Cognition: Timing in Music and Speech** Andrea Ravignani, Henkjan Honing, Sonja A. Kotz, 2018-07-24 Human speech and music share a number of similarities and differences. One of the closest similarities is their temporal nature as both i) develop over time, ii) form sequences of temporal intervals, possibly differing in duration and acoustical marking by different spectral properties, which are perceived as a rhythm, and iii) generate metrical expectations. Human brains are particularly efficient in perceiving, producing, and processing fine rhythmic information in music and speech. However, a number of critical questions remain to be answered: Where does this human sensitivity for rhythm arise? How did rhythm cognition develop in human evolution? How did environmental rhythms affect the evolution of brain rhythms? Which rhythm-specific neural circuits are shared between speech and music, or even with other domains? Evolutionary processes, long time scales often prevent direct observation. Understanding the psychology of rhythm and its evolution requires a close fitting integration of different perspectives. First empirical observations of music and speech in the field are contrasted and generate testable hypotheses. Experiments exploring linguistic and musical rhythm are performed across sensory modalities, ages, and animal species to address questions about domain specificity, development, and an evolutionary path of rhythm.

Finally experimental insights are integrated via synthetic modeling generating testable predictions about brain oscillations underlying rhythm cognition and its evolution Our understanding of the cognitive neurobiological and evolutionary bases of rhythm is rapidly increasing However researchers in different fields often work on parallel potentially converging strands with little mutual awareness This research topic builds a bridge across several disciplines focusing on the cognitive neuroscience of rhythm as an evolutionary process It includes contributions encompassing although not limited to 1 developmental and comparative studies of rhythm e g critical acquisition periods innateness 2 evidence of rhythmic behavior in other species both spontaneous and in controlled experiments 3 comparisons of rhythm processing in music and speech e g behavioral experiments systems neuroscience perspectives on music speech networks 4 evidence on rhythm processing across modalities and domains 5 studies on rhythm in interaction and context social affective etc 6 mathematical and computational e g connectionist symbolic models of rhythmicity as an evolved behavior
