Managerial Economics 11th Edition By Hirschey:

Introduction to Air Transport Economics Bijan Vasigh, Ken Fleming, 2016-05-06 *Introduction to Air Transport Economics From Theory to Applications* uniquely merges the institutional and technical aspects of the aviation industry with their theoretical economic underpinnings. In one comprehensive textbook it applies economic theory to all aspects of the aviation industry bringing together the numerous and informative articles and institutional developments that have characterized the field of airline economics in the last two decades as well as adding a number of areas original to an aviation text. Its integrative approach offers a fresh point of view that will find favor with many students of aviation. The book offers a self-contained theory and applications oriented text for any individual intent on entering the aviation industry as a practicing professional in the management area. It will be of greatest relevance to undergraduate and graduate students interested in obtaining a more complete understanding of the economics of the aviation industry. It will also appeal to many professionals who seek an accessible and practical explanation of the underlying economic forces that shape the industry. The second edition has been extensively updated throughout. It features new coverage of macroeconomics for managers, expanded analysis of modern revenue management and pricing decisions, and also reflects the many significant developments that have occurred since the original's publication. Instructors will find this modernized edition easier to use in class and suitable to a wider variety of undergraduate or graduate course structures while industry practitioners and all readers will find it more intuitively organized and more user friendly.

Modern Construction Management Prof. Frank Harris, Prof. Ronald McCaffer, 2013-02-28 This new edition of a core undergraduate textbook for construction managers reflects current best practice, topical industry preoccupations, and latest developments in courses and fundamental subjects for students. While the construction process still requires traditional skills, changes over recent decades today demand improved understanding of modern business production and contractual practices. The authors have responded accordingly, and the book has undergone a thorough re-write eliminating some of the older material and adding new processes now considered essential to achieving lean construction. Particular emphasis is given, for example, to supply chains and networks, value and risk management, BIM, ICT, project arrangements, corporate social responsibility, training, health and welfare, and environmental sustainability. *Modern Construction Management* presents construction as a socially responsible, innovative, carbon-reducing, manager-involved, people-orientated, crisis-free industry that is efficient and cost-effective. The overall themes for the Seventh Edition are: Drivers for efficiency, lean construction, underpinning production management and off-site production methods; Sustainability reflecting the transition to a low-carbon economy; Corporate Social Responsibility embracing health, safety, modernistic contracts, effective procurement and employment issues; Building Information Management directed towards the improvement of construction management systems. The comprehensive selection of worked examples based on real and practical situations in construction management and methods will help to consolidate learning. A companion website at www

wiley com go MCM7 offers invaluable support material for both tutors and students Solutions to the self learning exercises PowerPoint slides with discussion topics Journal and web references Structured to reflect site business and corporate responsibilities of managers in construction the book continues to provide strong coverage of the salient elements required for developing and equipping the modern construction manager with the competencies and skills for both technical and business related areas
