Linear Inequalities and Related Systems George Bernard Dantzig, 1956-10-21 The description for this book Linear Inequalities and Related Systems AM 38 Volume 38 will be forthcoming      **Systems of Linear Inequalities** A. S. Solodovnikov, 1980-02 This volume describes the relationship between systems of linear inequalities and the geometry of convex polygons examines solution sets for systems of linear inequalities in two and three unknowns extension of the processes introduced to systems in any number of unknowns is quite simple and examines questions of the consistency or inconsistency of such systems Finally it discusses the field of linear programming one of the principal applications of the theory of systems of linear inequalities A proof of the duality theorem of linear programming is presented in the last section

Khan,Faraz Mehmood,Josip Pečarić,2023-03-31 This book provides new contributions to the theory of inequalities for integral and sum and includes four chapters In the first chapter linear inequalities via interpolation polynomials and green functions are discussed New results related to Popoviciu type linear inequalities via extension of the Montgomery identity the Taylor formula Abel Gontscharoff s interpolation polynomials Hermite interpolation polynomials and the Fink identity with Green s functions are presented The second chapter is dedicated to Ostrowski s inequality and results with applications to numerical integration and probability theory The third chapter deals with results involving functions with nondecreasing increments Real life applications are discussed as well as and connection of functions with nondecreasing increments together with many important concepts including arithmetic integral mean wright convex functions convex functions nabla convex functions Jensen m convex functions m convex functions m nabla convex functions k monotonic functions absolutely monotonic functions completely monotonic functions Laplace transform and exponentially convex functions by using the finite difference operator of order m The fourth chapter is mainly based on Popoviciu and Cebaysev Popoviciu type identities and inequalities In this last chapter the authors present results by using delta and nabla operators of higher order      Faces for linear inequalities in 0-1 variables Laurence A. Wolsey,1973      **Surrogate Methods for Linear Inequalities and Linear Programming Problems** Selina Omagha Oko,1983      **A New Method for Solving Linear Inequalities** G. W. Stewart,MARYLAND UNIV COLLEGE PARK DEPT OF COMPUTER SCIENCE.,1980 This paper describes a new method for finding nontrivial solutions of the inequality  $Ax \leq 0$  where A is an  $m \times n$  matrix of rank n The method is based on the observation that a certain function f has a unique minimum if and only if the inequality fails to have a nontrivial solution Moreover if there is a solution the direction of divergence of an attempt to minimize f will converge to a solution The technique can also be used to solve inhomogeneous inequalities and hence linear programming problems although no claims are made about competitiveness with existing methods
