

When the transformer is connected to the power line, the current flows through the primary winding and is transformed into a higher voltage in the secondary winding. This higher voltage is then used to power the train's motor. The transformer is designed to provide a constant voltage to the train, regardless of the load. This ensures that the train runs smoothly and efficiently. The transformer is also designed to be safe, with no exposed wires or moving parts. It is a simple and reliable device that is essential for any Lionel train set.

**TECHNICAL INFORMATION**

The transformer is designed to operate at a voltage of 115 volts. It has a primary winding with 10 turns and a secondary winding with 100 turns. This gives it a turns ratio of 10:100, or 1:10. This means that the voltage in the secondary winding is 10 times the voltage in the primary winding. The transformer is also designed to handle a current of 1 ampere. This means that it can safely handle a load of up to 100 watts. The transformer is made of high-quality materials and is built to last. It is a reliable and safe device that is essential for any Lionel train set.
