Labview System Identification Toolkit Manual:

Modeling, Design, and Optimization of Net-Zero Energy Buildings Andreas Athienitis, William O'Brien, 2015-01-26 Building energy design is currently going through a period of major changes One key factor of this is the adoption of net zero energy as a long term goal for new buildings in most developed countries To achieve this goal a lot of research is needed to accumulate knowledge and to utilize it in practical applications In this book accomplished international experts present advanced modeling techniques as well as in depth case studies in order to aid designers in optimally using simulation tools for net zero energy building design The strategies and technologies discussed in this book are however also applicable for the design of energy plus buildings This book was facilitated by International Energy Agency's Solar Heating and Cooling SHC Programs and the Energy in Buildings and Communities EBC Programs through the joint SHC Task 40 EBC Annex 52 Towards Net Zero Energy Solar Buildings R D collaboration After presenting the fundamental concepts design strategies and technologies required to achieve net zero energy in buildings the book discusses different design processes and tools to support the design of net zero energy buildings NZEBs A substantial chapter reports on four diverse NZEBs that have been operating for at least two years These case studies are extremely high quality because they all have high resolution measured data and the authors were intimately involved in all of them from conception to operating By comparing the projections made using the respective design tools with the actual performance data successful and unsuccessful design techniques and processes design and simulation tools and technologies are identified Written by both academics and practitioners building designers and by North Americans as well as Europeans this book provides a very broad perspective It includes a detailed description of design processes and a list of appropriate tools for each design phase plus methods for parametric analysis and mathematical optimization It is a guideline for building designers that draws from both the profound theoretical background and the vast practical experience of the authors World Congress of Medical Physics and Biomedical Engineering 2006

Sun I. Kim, Tae S. Suh, 2007-05-07 These proceedings of the World Congress 2006 the fourteenth conference in this series offer a strong scientific program covering a wide range of issues and challenges which are currently present in Medical physics and Biomedical Engineering About 2 500 peer reviewed contributions are presented in a six volume book comprising 25 tracks joint conferences and symposia and including invited contributions from well known researchers in this field

Human Modeling for Bio-Inspired Robotics Jun Ueda, Yuichi Kurita, 2016-09-02 Human Modelling for Bio inspired Robotics Mechanical Engineering in Assistive Technologies presents the most cutting edge research outcomes in the area of mechanical and control aspects of human functions for macro scale human size applications Intended to provide researchers both in academia and industry with key content on which to base their developments this book is organized and written by senior experts in their fields Human Modeling for Bio Inspired Robotics Mechanical Engineering in Assistive Technologies offers a system level investigation into human mechanisms that inspire the development of assistive technologies and

humanoid robotics including topics in modelling of anatomical musculoskeletal neural and cognitive systems as well as motor skills adaptation and integration Each chapter is written by a subject expert and discusses its background research challenges key outcomes application and future trends This book will be especially useful for academic and industry researchers in this exciting field as well as graduate level students to bring them up to speed with the latest technology in mechanical design and control aspects of the area Previous knowledge of the fundamentals of kinematics dynamics control and signal processing is assumed Presents the most recent research outcomes in the area of mechanical and control aspects of human functions for macro scale human size applications Covers background information and fundamental concepts of human modelling Includes modelling of anatomical musculoskeletal neural and cognitive systems as well as motor skills adaptation integration and safety issues Assumes previous knowledge of the fundamentals of kinematics dynamics control and signal processing

Innovative Materials and Design of Soundwalls Paul N. Roschke, Hsiang-Yueh Yeh, Steven Esche, 1997 This report documents a study of the feasibility of using soundwalls constructed of recycled plastics in place of conventional building materials Important considerations in selecting materials used in this study include environmental impact acoustics aesthetics performance safety and cost Various recycled materials were solicited from commercial manufacturers and subjected to a number of laboratory and field tests These tests include three point bending tests impact hammer excitations and exposure to different types of weather Based on those results several of the most promising materials were selected for construction of a full scale field installation of a test section of a soundwall This field section was monitored for a period of one year for response to environmental factors such as wind and exposure to ultraviolet radiation Analysis of the field structure includes system identification of dynamic characteristics finite element simulation and acoustic performance Results show that noise insertion loss of the soundwall is exceptional Structurally the prototype soundwall performed adequately over the course of the project with only a few members showing detrimental effects from the harsh thermal environment System identification and experimental analysis of test data were successfully implemented and indicate that the prototype soundwall is moderately wind sensitive A finite element model of the soundwall was developed to simulate both static and dynamic response to loads Using methods of modal superposition and random response deflection was predicted for the top of the wall due to application of a strong wind event
