Worksheet On Combining Forces, And Resolving Forces

Instructions: Use the graphical method to find the resultant and equilibrant for the following force problems.

Definitions:

- Resultant - the single force that is equal to 2 or more forces.
- Equilibrant - the single force that will balance 2 or more forces.
 - Equal in magnitude but opposite in direction of the resultant.

Important: 1) Label all vectors AS SHOWN BELOW (1 point each)
2) All vectors should have arrows (1 point each)
3) The Resultant and Equilibrant should be reported with a magnitude, unit and direction. (1 point each)
4) Be neat!!!! (**Work in pencil**)

EXAMPLE:

3N North + 4N 45° S of E

**Resultant**

2.75 N 7° N of E

Equilibrant

2.75 N 7° S of W

Tools and Modes of Representation in the Laboratory Sciences U. Klein, 2013-04-17 constitutive of reference in laboratory sciences as cultural sign systems and their manipulation and superposition collectively shared classifications and associated conceptual frameworks and various forms of collective action and social institutions This raises the question of how much modes of representation and specific types of sign systems mobilized to construct them contribute to reference Semioticians have argued that sign systems are not merely passive media for expressing preconceived ideas but actively contribute to meaning Sign systems are culturally loaded with meaning stemming from previous practical applications and social traditions of applications In new local contexts of application they not only transfer stabilized meaning but also can be used as active resources to add new significance and modify previous meaning This view is supported by several analyses presented in this volume Sign systems can be implemented like tools that are manipulated and superposed with other types of signs to forge new representations The mode of representation made possible by applying and manipulating specific types of representational tools such as diagrammatic rather than mathematical representations or Berzelian formulas rather than verbal language contributes to meaning and forges fine grained differentiations between scientists concepts Taken together the essays contained in this volume give us a multifaceted picture of the broad variety of modes of representation in nineteenth century and twentieth century laboratory sciences of the way scientists juxtaposed and integrated various representations and of their pragmatic use as tools in scientific and industrial practice
