**International Financial Statistics Yearbook, 2017** International Monetary Fund. *Everyday Lifestyles and Sustainability* Fabricio Chicca, Brenda Vale, Robert Vale, 2018-04-09 The impact of humanity on the earth overshoots the earth's bio capacity to supply humanity's needs meaning that people are living off earth's capital rather than its income However not all countries are equal and this book explores why apparently similar patterns of daily living can lead to larger and smaller environmental impacts The contributors describe daily life in many different places in the world and then calculate the environmental impact of these ways of living from the perspective of ecological and carbon footprints This leads to comparison and discussion of what living within the limits of the planet might mean Current footprints for countries are derived from national statistics and these hide the variety of impacts made by individual people and the choices they make in their daily lives This book takes a bottom up approach by calculating the footprints of daily living The purpose is to show that small changes in behaviour now could avoid some very challenging problems in the future Offering a global perspective on the question of sustainable living this book will be of great interest to anyone with a concern for the future as well as students and researchers in environmental studies human geography and development studies

*Wealth and the Built Environment* Emilio José García, Brenda Vale, 2025-04-26 The need to address global environmental problems is urgent The United Nations 17 Sustainable Development Goals SDGs cover a wide range of global concerns from poverty hunger and gender equity to

justice and climate action Concerningly the SDGs still have faith in economic growth and technological innovation as the means of fixing all global concerns including climate change What is not questioned is whether solving development and sustainability problems through economic growth for the accumulation of wealth for the few has led to many of the current unequal development and environmental problems If unfair growth and wealth accumulation have been part of the problem how can they be part of the solution The problem with the SDGs is that their fulfilment relies on wealth creation without the fundamental concomitant of wealth redistribution The one common driver of change affecting both sustainability and development that has not been included in the SDGs is wealth the central focus of this book SDG 11 sustainable cities and communities presents a further paradox unless the issue of wealth and its fair distribution is grasped Cities are the places where wealth is generated but are also places where only a minority are wealthy The wealth generated in cities leads to higher consumption of resources higher emissions and higher disparities and inequalities However any version of a sustainable future will happen in the built environment made according to current ideals like the present belief in overcoming all humanity's problems by becoming wealthier A fundamental assumption of this book is that the first step toward a fairer habitat that can be maintained with the resources available is only possible if we stop designing cities and buildings as if everyone were wealthy or had to become wealthy To achieve this goal it is essential to identify and raise awareness of the impact of wealth to question how the myths about the advantages of wealth were built where they come from what shape they take in the built environment and who benefits from them
