Hibbeler, 1994-10-01 **Mechanics of Materials** , 2005 *Strength of Materials* Peter Black, 2013-10-22

Strength of Materials A Course for Students deals with theories of stress analysis The book describes simple stress strain and strain energy and defines with appropriate formulas commonly used terms such as load elasticity tensile test and temperature stresses The text then analyzes the moment when an applied force bends a subject beam under different load conditions The formula for the first and second moments of area and the formula for the first and second moments of mass are explained The book also describes the unstrained or neutral plane when a bending moment acting on a particular beam results in tensile and compressive strains The author also explains bending with direct stress torsion and the types of complex stresses

The theories of elastic failure are then discussed the Maximum Principal Stress Theory Rankine for brittle materials as well as the Maximum Shear Stress Theory Coulomb Tresca and Guest and the Maximum Strain Energy Theory Haigh which both concern ductile materials The text also addresses the stress that can occur in both thick and thin cylinders and then shows the appropriate computations to determine the downward forces as well as Lamé's Formulas which are used to find the radial and hoop stresses acting on the cylinder This textbook is useful for students of civil structural and mechanical engineering Designers and technicians of industrial machinery will also greatly profit from reading this book **Solution**
