Zoology in Early Modern Culture: Intersections of Science, Theology, Philology, and Political and Religious Education
,2014-10-09 This volume tries to map out the intriguing amalgam of the different partly conflicting approaches that shaped
early modern zoology Early modern reading of the Book of Nature comprised among others the description of species in the
literary tradition of antiquity as well as empirical observations vivisection and modern eyewitness accounts the translation of
zoological species into visual art for devotion prayer and religious education but also scientific and scholarly curiosity
theoretical philosophical and theological thinking regarding God s creation the Flood and the generation of animals new
attempts with respect to nomenclature and taxonomy the discovery of unknown species in the New World impressive
Wunderkammer collections and the keeping of exotic animals in princely menageries The volume demonstrates that theology
and philology played a pivotal role in the complex formation of this new science Contributors include Brian Ogilvie Bernd
