Engymetry and Personal Computing in Nuclear Medicine Dietrich P. Pretschner, 2013-03-08 Nuclear medicine is not and has not been a purely imaging discipline It is function analysis that has always been the focal point This fact has become particularly obvious in the last few years through the employment of new short lived radionuclides new technical procedures and data processing The disadvantage of function analysis in nuclear medicine through the use of radioactively labeled compounds is that more and more complicated and expensive equipment has to be used A further characteristic is that these machines are stationary and that the patients cannot be examined under physiological conditions For technical reasons the x camera is developing in the direction of measuring mainly the so called soft tissue emitters at the present time On the other hand positron emitters are the radionuclides which are of interest for metabolic functions At present positron cameras are even more expensive and complicated machines the use of which is very demanding In this book Priv Doz Dr med Dipl Ing D Peter pretschner has described a new system which contains his ideas and his technical developments He describes a solution to the urgent questions and difficulties in the employment of radioactive substances for diagnosis It does not demand large resources and can be used under the appropriate individual physiological conditions Here he was helped by his training as a natural scientist and engineer as well as by his being an experienced clinician

Ambulatory Blood Pressure Monitoring M.D. Weber, I.J. Drayer, 2013-03-09 The availability of new technologies that enable blood pressure to be measured and recorded continuously or repetitively during prolonged observation periods has created exciting opportunities for studying the physiology of blood pressure regulation and the characteristics of clinical hypertension Ambulatory blood pressure monitoring has been based on three types of approach The first of these has utilized an intra arterial catheter that allows blood pressure to be measured directly and continuously during a full 24 hour period The second approach is based on non invasive techniques and utilizes devices capable of automatically inflating conventional arm

cuffs and recording blood pressures at pre set intervals throughout the day The third and most simple method has depended upon semiautomated techniques that require the subject to inflate a cuff at convenient intervals during the period of observation During the last few years concerted research into these differing techniques has exposed their strengths and shortcomings Overall however there has been a growing perception that these approaches to the measurement of blood pressure might add considerably to the information obtained in the doctor's office by the traditional single or casual reading This book summarizes the state of the art in ambulatory blood pressure monitoring
