Manual Root System:

Methods of Studying Root Systems W. Böhm, 2012-12-06 Root research under natural field conditions is still a step child of science. The reason for this is primarily methodological. The known methods are tedious, time consuming and the accuracy of their results is often not very great. Many research workers have been discouraged by doing such root studies. The need for more information on the development and distribution of plant roots in different soils under various ecological conditions is however obvious in many ecological disciplines. Especially the applied botanical sciences such as agriculture, horticulture and forestry are interested in obtaining more data on plant roots in the soil. This book will give a survey of existing methods in ecological root research. Primarily field methods are presented; techniques for pot experiments are described only so far as they are important for solving ecological problems. Laboratory methods for studying root physiology are not covered in this book. Scientific publications on roots are scattered in many different journals published all over the world. By working through the international root literature I found that about ten thousand papers on root ecology have been published at the present. This is not very much compared with the immense literature on the aboveground parts of the plants but is however too much to cite in this book. Prospects and Applications for Plant-Associated Microbes, A laboratory manual Anna Maria Pirttilä, Seppo Sorvari, 2014-12-15 Plant associated microbes are ubiquitous organisms living in a range of interactions with their host. Involving two organisms research and applications of plant microbes are challenging and often require specific skills. This book guides the reader in the world of plant associated fungi giving both theoretical and practical insight on the potential of this interaction in biotechnology. Detailed instructions and step by step protocols are described for isolation, identification, localization and community analysis of fungi studies on their bioactivity, molecular plant fungal interactions and development of fungi as tools for biotechnology. A Laboratory Manual for the Study of General Botany William Evans Lawrence, 1924 State-of-the-art Technology and Applications in Crop Phenomics Wanneng Yang, John Doonan, Tony Pridmore, Malcolm John Hawkesford, Ji Zhou, 2021-12-01 **Modern Techniques of Rice Crop Production** Naeem Sarwar, Atique-ur-Rehman, Shakeel Ahmad, Mirza Hasanuzzaman, 2022-04-09 This book collects all the latest technologies with their implications on the global rice cultivation. It discusses all aspects of rice production and puts together the latest trends and best practices in the rice production. Rice is produced and consumed worldwide and especially an important crop for Asia. It is a staple food in majority of population living in this continent which distinguishes this from rest of the world. Climatic fluctuations, elevated concentrations of carbon dioxide, enhanced temperature have created extreme weather conditions for rice cultivation. Also increasing pest attacks make situation complicated for the farmers. Therefore rice production technology also has to be adjusted accordingly. This book is of interest to teachers, researchers, plant biotechnologists, pathologists, agronomists, soil scientists, food technologists from different part of the globe. Also the book serves as additional reading material for students of agriculture, soil science and environmental sciences. National and

international agricultural scientists policy makers will also find this to be a useful read

Mangroves: Ecology, Biodiversity and Management Rajesh P. Rastogi, Mahendra Phulwaria, Dharmendra K. Gupta, 2021-10-01 Mangroves are one of the most productive and biologically important blue carbon ecosystems across the coastal intertidal zone of earth. In the current scenario of serious environmental changes like global warming, climate change, extreme natural disasters, mangrove forests play a vital role in mitigating greenhouse gas emissions and maintaining ecosystem balance. Mangroves are unique ecosystems with rich biological diversity of different taxonomic groups exhibiting great ecological and commercial importance. The book consolidates existing and emerging information on ecology of mangroves with a special reference to their biodiversity and management. It emphasizes on the role of mangroves in providing various ecological services. The book is a comprehensive compilation covering all aspects of mangrove ecology. It is useful for students and researchers in ecology, plants sciences and environmental sciences.

Abiotic Stress in Underground Vegetables Milan Kumar Lal, Rahul Kumar Tiwari, Awadhesh Kumar, Ravinder Kumar, Brajesh Singh, 2025-03-20 Underground Vegetable Crops provides comprehensive information on the morphological, physiological and biochemical responses of various underground vegetable crops to abiotic stress and the strategies for managing these crops under these conditions. Climate changes pose major challenges to the productivity and yield of crops, particularly horticultural crops that bear their edible parts underground. Underground vegetable crops are highly nutritious non-cereal plant species grown in various agro-ecological zones and play a significant role in feeding people around the world. Further, while these crops are consumed by humans, they are also used as animal feed and raw materials for high-value industrial products. Given their widespread consumption, improving these crops' production and productivity is paramount. To address the range of challenges created by climate changes, it is crucial to understand the physiological, biochemical and molecular responses of crops to abiotic stress and the potential mechanisms of resistance and mitigation. The potential role of biostimulant chemicals, hormones, novel chemicals and microorganisms in agriculture to enhance the tolerance of crops to abiotic and biotic stress, which is an area of importance that has received less attention until now. The proposed book aims to provide comprehensive information on the morphological, physiological and biochemical responses of various underground vegetable crops to abiotic stress and the strategies for managing these crops under these conditions. This book is an essential resource for researchers, students, crop growers and all stakeholders in the field of crop sciences who are interested in improving the yield and productivity of these vital crops. Provides complete information on functional plant physiology and molecular aspect of underground vegetable crops. Presents comprehensive information and potential application strategies of PGRPs in the horticultural crop production system. Includes synthesis and assimilation of the potential use of novel phytohormone, diverse plant growth stages.

Ecophysiology of root systems-environment interaction Boris Rewald, Omer Falik, Douglas Godbold, Shimon Rachmilevitch, 2014-09-03 There is a

scarcity of detailed information regarding the ecophysiology of root systems and the way root system functioning is affected by both internal and external factors Furthermore global climate change is expected to increase the intensity of climate extremes such as severe drought heat waves and periods of heavy rainfall in addition other stresses such as salinization of soils are increasing world wide Recently an increasing awareness has developed that understanding plant traits will play a major role in breeding of future crop plants For example there is increasing evidence that the traits of root systems are defined by the properties of individual roots However further knowledge on the functional importance of root segments and the molecular physiological mechanisms underlying root system functioning and persistence is needed and would specifically allow modifying crop root system functionality and efficiency in the future Another major gap in knowledge is localized at the root soil interface and in regard to the potential adaptive plasticity of root rhizosphere interactions under abiotic stress and or competition It is currently unknown whether adaptations in microbe communities occur for example due to modified exudation rates and what are the subsequent influences on nutrient mobilization and uptake Furthermore uncovering the mechanisms by which roots perceive neighboring roots may not only contribute to our understanding of plant developmental strategies but also has important implications on the study of competitive interactions in natural communities and in optimizing plant performance and resource use in agricultural and silvicultural systems In this Research Topic we aimed to provide an on line open access snapshot of the current state of the art of the field of root ecology and physiology with special focus on the translation of root structure to function and how root systems are influenced by interplay with internal and external factors such as abiotic stress microbes and plant plant interaction We welcomed original research papers but reviews of specific topics articles formulating opinions or describing cutting edge methods were also gladly accepted
