## IMPORTANTE

### INFORMACIÓN PARA EL RODEO DE 50 MOTOCICLISTA

Los primeros 1000 kilómetros son los más importantes para la duración de su motocicleta. El rodaje apropiado durante estos kilómetros le ayudará a asegurar la máxima duración y el mejor rendimiento de su nueva motocicleta. Las piezas Suzuki están fabricadas con materiales de gran calidad, y las piezas maquinadas están acabadas con las tolerancias estrictas. El rodaje apropiado permite que las superficies maquinadas se pulen y se adapten uniformemente entre sí.

La fiabilidad y el rendimiento de la motocicleta dependen de las cuidados especiales y de la moderación ejercida durante el periodo de rodaje. Es especialmente importante que evite que el motor funcione de forma que sus piezas queden expuestas a un calentamiento excesivo.

Con respecto a las recomendaciones específicas para el rodaje, consulte la sección RODEO.

Sulfur Metabolism in Phototrophic Organisms Rüdiger Hell, Christiane Dahl, David B. Knaff, Thomas Leustek, 2008-03-19 Sulfur is one of the most versatile elements in life due to its reactivity in different oxidation and reduction states In phototrophic organisms the redox properties of sulfur in proteins and of sulfur containing metabolites are particularly important in the interaction between the reductive assimilation processes of photosynthesis and reactive oxygen species that arise as by products of electron transport chains Thiol groups in proteins and metabolites are targets of reactive

oxygen species resulting in potential damage and at the same time giving rise to redox signal cascades that trigger repair reactions and adaptation to environmental stress Further reduced sulfur compounds play a prominent role as electron donors for photosynthetic carbon dioxide fixation in anoxygenic phototrophic sulfur bacteria Interest in the investigation of the multiple functions of sulfur related processes has increased exponentially in recent years especially in molecular and cellular biology biochemistry agrobiotechnology and ecology This book provides for the first time in depth and integrated coverage of the functions of sulfur in phototrophic organisms including bacteria plants and algae it bridges gaps between biochemistry and cellular biology of sulfur in these organisms and of biology and environments dominated by them This book is designed to be a comprehensive resource on sulfur in phototrophic organisms for advanced undergraduate and graduate students beginning researchers and teachers in the area of photosynthesis bacterial energy metabolism biotechnology plant nutrition plant production and plant molecular physiology

**Vaccines for Pandemic Influenza** Richard W Compans,Walter A. Orenstein,2009-09-18 Recent years have seen unprecedented outbreaks of avian influenza A viruses In particular highly pathogenic H5N1 viruses have not only resulted in widespread outbreaks in domestic poultry but have been transmitted to humans resulting in numerous fatalities The rapid expansion in their geographic distribution and the possibility that these viruses could acquire the ability to spread from person to person raises the risk that such a virus could cause a global pandemic with high morbidity and mortality An effective influenza vaccine represents the best approach to prevent and control such an emerging pandemic However current influenza vaccines are directed at existing seasonal influenza viruses which have little or no antigenic relationship to the highly pathogenic H5N1 strains Concerns about pandemic preparedness have greatly stimulated research activities to develop eff tive vaccines for pandemic influenza viruses and to overcome the limitations inh ent in current approaches to vaccine production and distribution These limitations include the use of embryonated chicken eggs as the substrate for vaccine prod tion which is time consuming and could involve potential biohazards in growth of new virus strains Other limitations include the requirement that the current inac vated influenza vaccines be administered using needles and syringes requiring trained personnel which could be a bottleneck when attempting to vaccinate large populations in mass campaigns In addition the current inactivated vaccines that are delivered by injection elicit limited protective immunity in the upper respiratory tract where the infection process is initiated
