

Regular manual cleaning

Mimaki printers have several onboard features to keep the machines running optimally. Some areas cannot be cared for automatically by the printer. It is important to continue the daily printer maintenance even when the printers are idle. If daily maintenance is not possible, once-a-week maintenance and cleaning will help supplement onboard cleaning routines. For those customers who will not have access to the printer, or are temporarily closing, please see long term storage below.

Capping Station and Wiper Maintenance

The wiper and cap surfaces are the most critical cleaning systems in the printer. These items are responsible for maintaining and cleaning the print head surface. Keep these areas clean and free of debris or ink buildup.

Running Test Prints

Running a weekly test print will help us identify any potential errors before they become significant problems. If you can inspect a weekly test print, please report any unusual output to your Mimaki Dealer or contact us directly at 888-530-3992.

Mimaki Cutting Plotters and Print/Cut units

Mimaki cutting products require very little maintenance. These machines can be safely turned off and unplugged for long periods.

The cutting heads on our print/cut machines also require little to no maintenance. Please follow our other guidelines to maintain the print heads on these units.

Enabling Automated Cleaning

The automated cleaning functions on Mimaki products are all enabled out of the box. The printers maintain the print head surface, ink discharge path, and recirculation systems according to internal schedules. This maximizes both production quality and print head life.

Medical Coatings and Deposition Technologies David Glocker, Shrirang Ranade, 2016-07-11 Medical Coatings and Deposition Technologies is an important new addition to the libraries of medical device designers and manufacturers. Coatings enable the properties of the surface of a device to be controlled independently from the underlying bulk properties; they are often critical to the performance of the device and their use is rapidly growing. This book provides an introduction to many of the most important types of coatings used on modern medical devices as well as descriptions of the techniques by which they are applied and methods for testing their efficacy. Developers of new medical devices and those responsible for producing them will find it an important reference when deciding if a particular functionality can be provided by a coating and what limitations may apply in a given application. Written as a practical guide and containing many specific coating examples and a large number of references for further reading, the book will also be useful to students in materials science engineering with an interest in medical devices. Chapters on antimicrobial coatings as well as coatings for biocompatibility, drug delivery, radiopacity and hardness are supported by chapters describing key liquid coating processes, plasma-based processes and chemical vapor deposition. Many types of coatings can be applied by more than one technique and the reader will learn the tradeoffs given the relevant design, manufacturing and economic constraints. The chapter on regulatory considerations provides important perspectives regarding the marketing of these coatings and medical devices.

Combining their wealth of experience, the book presents in-depth knowledge on the advancement and improvement of fuel rods that is gleaned from decades of experience and lessons learned. The inclusion of analysis codes for the design and safety elements ensures that this is a unique reference which will provide the reader with a solid understanding which they can transfer to their own professional and research settings. Future prospects for next-generation PWR and Small Modular Reactors are also discussed, giving the reader a basis for further research of their own. Contains contributions from the leaders and pioneers in nuclear research at the Japanese Society of Mechanical Engineers and draws upon their combined wealth of knowledge and experience. Includes analysis codes such as RELAP5 for the design and safety improvement of pressurized water reactors (PWRs). Presents history, examples and case studies from Japan and other key regions such as the United States and Europe.
