Revolutionizing K-12 Blended Learning through the i²Flex Classroom Model Avgerinou, Maria D., Gialamas, Stefanos P., 2016-06-20 Blended learning has gained significant attention recently by educational leaders practitioners and researchers i Flex a variation of blended learning is based on the premise that certain non interactive teaching activities such as lecturing can take place by students without teachers direct involvement Classroom time can then be used for educational activities that fully exploit teacher student and student student interactions allowing for meaningful personalized feedback and scaffolding on demand Revolutionizing K 12 Blended Learning through the i Flex Classroom Model presents a well rounded discussion on the i Flex model highlighting methods for K 12 course design delivery and evaluation in addition to teacher performance assessment in a blended i Flex environment Emphasizing new methods for improving the classroom and learning experience in addition to preparing students for higher education and careers this publication is an essential reference source for pre service and in service teachers researchers administrators and educational technology developers

Systems Biology Marvin Cassman, Adam Arkin, Frank Doyle, Fumiaki Katagiri, Douglas Lauffenburger, Cynthia Stokes, 2007-05-16 Systems biology is defined for the purpose of this study as the understanding of biological network behaviors and in particular their dynamic aspects which requires the utilization of mathematical modeling tightly linked to experiment This involves a variety of approaches such as the identification and validation of networks the creation of appropriate datasets the development of tools for data acquisition and software development and the use of modeling and simulation software in close linkage with experiment All of these are discussed in this volume Of course the definition becomes ambiguous at the margins but at the core is the focus on networks which makes it clear that the goal is to understand the operation of the systems rather than the component parts It was concluded that the U S is currently ahead of the rest of the world in systems biology largely because of earlier investment by funding organizations and research institutions This is reflected in a large number of active research groups and educational programs and a diverse and growing funding base However there is evidence of rapid development outside the U S much of it begun in the last two to three years Overall however the picture is of an active field in the early stages of explosive growth This volume is aimed at academic researchers government research agency representatives and graduate students
