**Chapter 1** This chapter although the longest is a brief review of the interactions between technology, economy and politics. The subject is a much neglected one and I believe that understanding of these interactions is vital for understanding the underlying causes of some of our most important pressing issues. The chapter discusses the interactions between technologies, economy and politics, examining the effect of technologies on economic development and political ideologies.

**Chapter 2** This chapter deals with technological revolutions in general and the digital revolution in particular. I shall discuss the components of the digital economy. These being knowledge, digitisation, virtualisation, molecularization, integration, internetworking, disintermediation, convergence, innovation, sharing, economy, immediacy and discordant. In addition we shall examine the disruptors that are changing the face of competition in the marketplace.

This subject is divided into two parts: the first part deals with the cryptocurrencies and their viability as currencies. One of the most popular cryptocurrencies, the Bitcoin, will be examined in depth. The second part is somewhat technical and deals with the inner workings of the blockchains. As with cryptocurrencies, many see a bright future for the blockchains, especially in the form of smart contracts. Many believe that blockchains will be of great value in areas such as finance, handling contracts.

**A Financial Theory of the Business Cycle** Edward W. Fuller, Warren Young, 2025-02-17 A Financial Theory of the Business Cycle presents a new approach to business cycle theory based on the net present value The book develops a novel diagrammatic approach to illustrate how fractional reserve banking systematically distorts net present value calculations In addition to providing fresh insights the new diagrammatic approach provides a comparative framework that can be used to compare pre existing theories including

those of John Maynard Keynes Friedrich Hayek Milton Friedman and Robert E Lucas Jr The net present value is the most important concept in the theory and practice of modern finance As such it is the proper framework for explaining the systematic financial losses that occur during the business cycle Eugen von Böhm-Bawerk and Irving Fisher developed the modern theory of the net present value and the financial theory of the business cycle developed in this book is rooted in their tradition Although financial elements played a central role in their respective theories Keynes and Hayek did not use the net present value This failure created problems that still haunt business cycle theory today This book addresses these problems and attempts to steer financial theories of the business cycle back to the course set by Böhm-Bawerk and Fisher In addition to macroeconomists this book will appeal to financial economists money and banking experts accountants financial analysts and businesspeople generally
