scale the opening of borders and improved transport networks has induced a spatial redistribution of production and ownership. Until recently the concomitant economic growth eased the way towards the necessary reorganization but at the same time created additional environmental and transport problems. This phenomenon is pervasive all around the globe but it particularly affects the European continent which is still fragmented by administrative, cultural and linguistic differences, national boundaries and rivalries. In this context the slow but persistent drive towards market integration and deregulation makes Europe an extraordinary laboratory for politicians, economic researchers and especially for transport analysts. *The Mineral Surveyor & Valuer's Complete Guide* William Lintern, 1898
